Re: DRAFT 2015 Annual Water Quality Monitoring Report for the Rocky
Reach Project

Mr. Peterschmidt:

Attached for your review and comment is the DRAFT 2015 Water Quality
Monitoring Report for the Rocky Reach Hydroelectric Project.
Please review and submit any comments you may have on or before 5:00 p.m.
April 1, 2016 via email at marcie.steinmetz@chelanpud.org.

If you have any questions, please do not hesitate to contact me.

Thank you,

Marcie Steinmetz | **Water Resource Specialist**

EXECUTIVE SUMMARY

This annual water quality monitoring report is being submitted to Washington State Department of Ecology (Ecology) as required by Section 5.7(8) of the 401 Water Quality Certification (401 Certification) (Ecology, 2006) of the Rocky Reach License.

Section 5.7(1) and (2) required Chelan County Public Utility District No.1 (Chelan PUD) to prepare a Quality Assurance Project Plan (QAPP) (Chelan PUD, 2010) for all studies included in the Water Quality Management Plan (WQMP) of the Rocky Reach Settlement Agreement (Chelan PUD, 2006) and to update the QAPP annually based on a yearly review of data quality.

FERC issued their order modifying and approving the QAPP for the Rocky Reach Project on November 3, 2010. The QAPP (Appendix A) provides the basic framework for all the water quality monitoring and reporting required in the Rocky Reach 401 Certification. For 2016, Chelan PUD does not have any updates for the QAPP (Chelan PUD, 2010).

Chelan PUD has prepared this annual water quality report to summarize the results of the following:

- 2015 total dissolved gas data collected and analyzed from January 1 through March 31 and September 1 through December 31 (non fish-spill season) as requested by Ecology in their December 14, 2011 letter to Chelan PUD.
- 2015 water temperature data collected and analyzed in the Rocky Reach forebay and tailrace, April 1 through October 31 as required by Section 5.5(1)(a).
- 2015 hourly water temperature data provided by Public Utility District No.1 of Douglas County (Douglas PUD) from the Wells Dam tailrace as required by Section 5.5(1)(a).

Results of Chelan PUD's 2015 water quality monitoring season included: 27 exceedances of the 110% TDG standard during the non-fish spill season and approximately 93 days where the 17.5°C temperature standard was reached or exceeded. In general, water temperatures peaked July through September, with some daily maximum values greater than 20°C. Chelan PUD will continue to monitor TDG and temperature in the 2016 monitoring season as specified by the 401 Certification and Ecology/FERC approved QAPP (Chelan PUD, 2010).

SECTION 1: INTRODUCTION

The Rocky Reach Hydroelectric Project (Project), owned and operated by Chelan PUD, is located on the Columbia River in Chelan County, Washington, approximately seven miles upstream of the city of Wenatchee, Washington (Figure 1-1). The Project utilizes the waters of the Columbia River, whose drainage basin extends over substantial portions of northern Washington, Idaho, Montana and into Canada. The Project reservoir (Lake Entiat) extends 43 miles to Douglas County PUD's Wells Dam. The Project consists of an 8,235-acre reservoir; a 2,847 foot long by 130 foot high concrete gravity dam spanning the river, including a powerhouse and spillway; a juvenile fish bypass system (JBS), and hatchery facilities.

Section 5.7(1) and (2) required Chelan County Public Utility District No.1 (Chelan PUD) to prepare a Quality Assurance Project Plan (QAPP) for all studies included in the Water Quality Management Plan (WQMP) of the Rocky Reach Settlement Agreement (Chelan PUD, 2006) and to update the QAPP (Chelan PUD, 2010) annually based on a yearly review of data quality. Upon our review of water quality data collected in 2015, no changes or updates are needed to the QAPP. The data collected and summarized in this report were collected in accordance with the Rocky Reach QAPP.

FERC issued their order modifying and approving the QAPP for the Rocky Reach Project on November 3, 2010. The QAPP (Chelan PUD, 2010) (Appendix A) provides the basic framework for all the water quality monitoring and reporting required in the Rocky Reach 401 Certification.

Section 5.7(8) of the 401 Certification requires the submittal of an annual report of water quality monitoring results, along with a summary report by March 1 of each year to Ecology. Ecology will use the monitoring results to track the Project's progress toward meeting and remaining in compliance with the state water quality standards. Additionally, the FERC order modifying and approving the QAPP (Chelan PUD, 2010) requires the submittal of the final report to the FERC by May 1 of each year.

Chelan County Public Utility District No.1 (Chelan PUD) prepared this annual report to summarize the results of the following water quality parameters in accordance with Section 5.7(8) of the 401 Certification:

- 2015 total dissolved gas data collected and analyzed from January 1 through March 31 and September 1 through December 31 (non fish-spill season) as requested by Ecology in their December 14, 2011 letter to Chelan PUD.
- 2015 water temperature data collected and analyzed in the Rocky Reach forebay and tailrace, April 1 through October 31 as required by Section 5.5(1)(a).
- 2015 hourly water temperature data provided by Douglas PUD from the Wells Dam tailrace as required by Section 5.5(1)(a).

Section 3 of this report discusses the water quality monitoring results and summarizes the data collected in 2015.

Figure 1-1: Project Location

SECTION 2: MONITORING PROCEDURES

2.1 Quality Assurance Project Plan

The water quality data for the Rocky Reach Project summarized in this report were collected in accordance with Chelan PUD's FERC and Ecology approved QAPP (Chelan PUD, 2010). The QAPP provides details on water quality monitoring methods and procedures, including the following:

- purpose of monitoring;
- sampling procedures, frequency and equipment;
- analytical methods and quality control procedures;
- data handling and assessment procedures; and
- monitoring protocols.

The purpose of the water quality monitoring and data collection is to provide information on water quality conditions within the Project as well as verify compliance with applicable water quality standards and conditions within the 401 Certification. The QAPP (Chelan PUD, 2010) can be found in Appendix A of this report. In accordance with Section 5.7(2), Chelan PUD shall review and update the QAPP annually based on a yearly review of data quality. Upon our review of water quality data collected in 2015, no changes or updates are needed for the QAPP.

2.2 Regulatory Framework

2.2.1 Total Dissolved Gas

The Washington State water quality numeric criteria for TDG (Washington Administrative Code (WAC) 173-201A-200(1)(f)) address standards for the surface waters of Washington State. Under the water quality standards (standards), TDG shall not exceed 110% at any point of measurement in any State water body. However, the TDG criteria may be adjusted to aid fish passage over hydroelectric dams when consistent with an Ecology approved gas abatement plan. This plan must be accompanied by fisheries management and physical and biological monitoring plans. Ecology may approve, on a per application basis, a temporary exemption to the TDG standard (110%) to allow spill for juvenile fish passage on the Columbia and Snake rivers (WAC 173-201A-200(1)(f)(ii)). On the Columbia and Snake rivers, there are three separate standards with regard to the TDG exemption: 1) in the tailrace of a dam, TDG shall not exceed 125% as measured in any one hour period and 2) TDG shall not exceed 120% in the tailrace of a dam and shall not exceed 115% in the forebay of the next dam downstream as measured as an average of the 12 highest consecutive (12C-High) hourly readings in any one day (24-hour period).

2.2.2 7Q10 Flows

Section 5.4.1(b) of the 401 Certification (Ecology, 2006) and WAC 173-201A-200(f)(i) state that the water quality criteria for TDG shall not apply when the stream flow exceeds the seven-day, ten-year frequency flood stage (7Q10). The 7Q10 flood flow for Rocky Reach Dam was calculated to be 252 thousand cubic feet per second (kcfs).

2.2.3 Water Temperature

WAC 173-201A-200(1)(c) designate the segment of the Columbia River within the Project as salmonid spawning, rearing, and migration; therefore, water temperature must remain below 17.5°C, as measured by the seven-day average of the daily maximum temperatures (7-DADMax). When a water body's temperature is warmer than the criteria (or within 0.3°C of the criteria) and that condition is due to natural conditions, then human actions considered cumulatively may not cause the 7-DADMax temperature of that water body to increase more than 0.3°C.

Certain sections of the Columbia River within the Project are classified as impaired for temperature under Section 303(d) of the Clean Water Act. Portions of the Columbia River upstream of the Project are also classified as impaired for temperature. Ecology has indicated that a Total Maximum Daily Load (TMDL) for temperature is expected to be developed by the Environmental Protection Agency (EPA) that will establish a final wasteload and load allocation for temperature (Ecology, 2016).

2.3 Fixed Monitoring Stations

In accordance with Section 5.4.1(a) of the 401 Certification (Ecology, 2006), Chelan PUD currently operates and maintains two fixed-site water quality monitoring stations (FMS) at the Rocky Reach Project that record barometric pressure (millimeters of mercury (mm/Hg)), TDG % saturation, and temperature (degrees Celsius). Barometric pressure, TDG percentage saturation, and temperature are recorded at 15-minute intervals, throughout the year in accordance with Chelan PUD's Ecology and the FERC approved QAPP (Chelan PUD, 2010).

These water quality data are recorded at 15-minute intervals and are averaged into hourly readings for use in daily and 12-hour averages, as well as daily high values. The hourly average data is forwarded to the United States Army Corps of Engineers (USACE), Columbia River Basin Water Management Division on an hourly basis and posted on their site on their website. The data can be found on their website by navigating from the USACE home page to the Columbia River Basin Water Management Division web page. From this location, select the Rocky Reach Project from the map and select TDG, Water Quality Data.

Each Chelan PUD FMS is equipped with a Hydrolab® Minisonde® 5, enclosed in a submerged conduit. These Hydrolab® Minisonde® 5's or probes are connected to an automated system that allows Chelan PUD to monitor barometric pressure, TDG, and water temperature on an hourly basis. Probes are maintained and calibrated as outlined in the QAPP (Chelan PUD, 2010) through contract services provided by Columbia Basin Environmental, LLC.

The forebay FMS are located on the upstream face of Rocky Reach and Rock Dam (Figure 2-1). The probe is lowered down a conduit, secured to the upstream face of the Project, and submerged to a depth of approximately 15 feet. The tailrace FMS is located downstream of the Project approximately one third of a mile downstream of the spillway on the JBS outfall (Figure 2-1), as required by the 401 Certification (Ecology, 2006). This location was chosen because it was the most feasible location near the end of the aerated zone, which is the compliance point for the Mid-Columbia TDG TMDL.

Figure 2-1: Rocky Reach project, forebay, tailrace and fixed monitoring stations.

SECTION 3: RESULTS

3.1 Total Dissolved Gas

As explained in Section 2.2.1, a temporary adjustment to the water quality standards for TDG takes place during the fish-spill season, and therefore TDG monitoring results are broken into two different periods: the non fish and fish-spill seasons and are discussed further below.

3.1.1 *Fish-Spill Season*

Section 5.4(1)(a) of the 401 Certification requires Chelan PUD to submit an annual report related to TDG and fish-spill data collected during the fish-spill season to Ecology. The Draft 2015 Annual Total Dissolved Gas Report was reviewed and approved by Ecology on November 25, 2015. This report covered TDG monitoring data results collected during the fish-spill season (April 1 – August 31) and therefore is not covered in this summary report. The 2015 Annual Total Dissolved Gas Report can be found in Appendix B of this report.

3.1.2 *Non Fish-Spill Season*

As described in Section 5.4(2) of the 401 Certification; for the purposes of compliance, the fish spill season is defined as April 1 through August 31 and non-fish spill season defined as September 1 to March 31. Hourly TDG data were collected and analyzed from January 1 through March 31 and September 1 through December 31. Data collection, quality assurance and quality control (QA/QC) measures and analyses of TDG values mirror those described in the QAPP (Chelan PUD, 2010).

For the purposes of this summary report, data recorded during 2015 were analyzed for exceedances from current water quality standards during the non-fish spill season. Suspect or erroneous values were omitted from the analysis, but are included, as well as an explanation for omission, in Appendix C and in Table 3-1 of this report.

Table 3-1 displays the number of hourly TDG values that were omitted/lost from the dataset due to various QA/QC issues. Five hours were lost in the forebay due to updates to the supervisory control and data acquisition (SCADA) system. 146 hours were lost in the tailrace due to data cable failure. The data cable was replaced.

Table 3-1: Hourly TDG values omitted/lost during 2015

Data losses/erroneous data of the 1-DMax April 1			
Location	Total Available Hours	Lost/erroneous Data Hours	Percent Data Loss
Rocky Reach forebay	5,088	5	0.1
Rocky Reach tailrace	5,088	146	2.8
Total	10,176	151	1.4

The summary values (mean, standard deviation, minimum, and maximum) for all hourly TDG measurements during non-fish spill season are presented in Table 3-2 below.

Table 3-2: Summary of hourly total dissolved gas measurements from each fixed monitoring station during the 2015 non-fish-spill season

Location	Data Collection Period	Mean ¹	Standard deviation	Min ¹	Max ¹
Rocky Reach forebay	Jan 1-Mar 31	100.6	3.7	94.6	108.0
	Sept 1-Dec 31	98.2	2.6	92.6	105.2
Rocky Reach tailrace	Jan 1-Mar 31	103.0	5.0	96.1	120.1
	Sept 1-Dec 31	99.2	2.1	93.6	111.7
¹ All values represent percent saturation					

3.1.2.1 Total Dissolved Gas Exceedances

There were 27 daily TDG exceedances during the non-fish season for 2015. Table 3-3 displays the number of TDG daily exceedances from current water quality standards as measured at the FMS. The hourly TDG values from each day during the non-fish spill seasons from each FSM station can be found in Appendix C.

Table 3-3: Number of 2015 non-fish spill season total dissolved gas exceedances

Location	Data Collection Period	Exceedances of 110% criteria	Total days	% above standard
Rocky Reach forebay	Jan 1-Mar 31	0	90	100
	Sept 1-Dec 31	0	122	100
Rocky Reach tailrace	Jan 1-Mar 31	26	90	29
	Sept 1-Dec 31	1	122	82
Total		27	424	6.4

Figure 3-1 displays the daily maximum TDG readings from each twenty-four hour period during the non-fish spill season from each FMS station. The hourly TDG values from each day during the non-fish spill seasons from each FMS station can be found in Appendix C.

Figure 3-1: Daily maximum TDG readings from each FMS

3.2 Water Temperature

Section 5.5(1)(a) of the 401 Certification provides three conditions regarding water temperature monitoring as listed below:

1. Chelan PUD shall monitor temperatures in the forebay and tailrace annually from April through October for the term of the New License and any subsequent annual licenses or until such monitoring is no longer required by Ecology, whichever occurs sooner.
2. Chelan PUD monitor water temperatures in the juvenile bypass system and upstream fishway for one year, unless Ecology determines, in consultation with the Rocky Reach Fish Forum (RRFF), that additional monitoring is required.
3. Chelan PUD shall also compile hourly water temperature data from the Wells dam tailrace for the term of the New License or any subsequent annual licenses or until such data collection is no longer required by Ecology, whichever occurs sooner.

Chelan PUD has completed item number 2 above; water temperature monitoring of the juvenile bypass system and upstream fishway in consultation with Ecology and the RRFF (Chelan PUD,

2013)(Chelan PUD, 2014). No additional water temperature monitoring is required for the juvenile bypass system and upstream fishway. Items numbered 1 and 3 are required for the term of the License or until such monitoring is no longer required by Ecology and are reported in Section 3.2.1 of this report.

3.2.1 Water Temperature from Rocky Reach Forebay, Tailrace, and Wells Dam Tailrace

Water temperature data were collected on an hourly basis during the monitoring season. Daily maximum temperatures from the three sites were used to determine the 7-DADMax. Data collection, QA/QC, and analyses of water temperature data followed those described in the QAPP (Chelan PUD, 2010). Overall data loss in 2015 was 69 hours of the combined 10,272 available hours or 0.7 percent data loss, which was well within the 90 percent data completeness data quality objective as specified in the QAPP. Table 3-4 demonstrates the number of hours that data was omitted/lost for the 2015 monitoring season.

Table 3-4: Overview of the water temperature data losses/erroneous data of the 1-DMax, April 1 through October 31, 2015

Data losses/erroneous data of the 1-DMax April 1			
Location	Total Available Hours	Lost/erroneous Data Hours	Percent Data Loss
Rocky Reach forebay	5,136	1	0.0
Rocky Reach tailrace	5,136	68	1.3
Total	10,272	69	0.7

Table 3-5 provides a summary of the 7-DADMax in the Wells tailrace, Rocky Reach forebay and tailrace. In general, water temperatures peaked during the period of July 1 through September 30, to values equal to or greater than 17.5 °C. During this period, temperatures measured at the Wells tailrace were approximately 0.3°C lower, on average, than temperatures measured at the Rocky Reach forebay. Also during this same time period, water temperatures measured at the Rocky Reach tailrace were, on average, 0.1°C lower than water temperatures measured in the forebay. Figure 3-2 presents a graphical display of the 7-DADMax values. All temperature data is presented in Appendix D of this document.

Table 3-5: Summary of 7-DADMax temperature criterion in the Rocky Reach forebay, Rocky Reach tailrace, and Wells tailrace in 2015.

Location	Data Collection Period	Mean¹	Standard Deviation	Minimum¹	Maximum¹
Wells tailrace	4/1—10/31	15.5	4.0	6.3	20.1
RR FB	4/1—10/31	15.8	4.0	6.6	20.2
RR TR	4/1—10/31	15.7	4.0	6.6	20.2

¹All values are in degrees Celsius

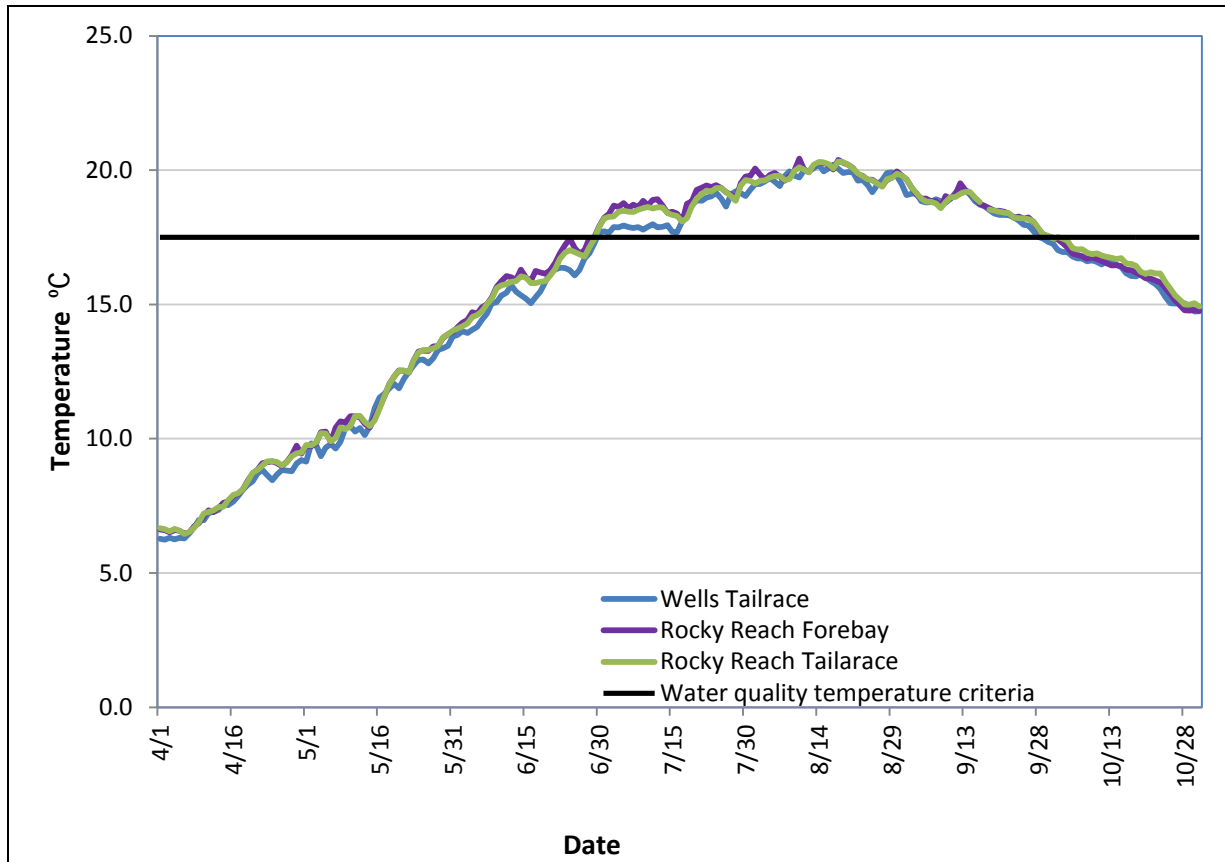

Figure 3-2: 7-DADMax Temperatures in the Wells tailrace, Rocky Reach forebay and tailrace.

3.2.2 Water Temperature Modeling

Section 5.5(1)(c) of the 401 Certification states temperature data from the Project forebay, tailrace and Wells Dam tailrace will be used to run the CE-QUAL-W2 model in Year five of the License to evaluate the Project’s compliance with numeric temperature criteria. However, in a letter received by Chelan PUD on April 21, 2014, Ecology recommended that modeling temperature in the Rocky Reach pool be postponed until such time as it may be recommended by Ecology. Chelan PUD is currently coordinating with the USACE regarding their modeling efforts on the Columbia River and will continue this coordination.

SECTION 4: CONCLUSIONS

Water quality data collected in 2015 at Rocky Reach FMS included hourly TDG and water temperature data. Results indicated 26 exceedances of the 110% TDG standard during the non-fish spill season. The 7-DADMax of 17.5°C was exceeded 93 days in the forebay and tailrace.

In accordance with the 401 Certification, Chelan PUD will continue its hourly TDG and water temperature monitoring. Additionally, Chelan PUD will continue its annual reporting of the data for the purposes of tracking the Project's progress toward meeting and remaining in compliance with the State water quality standards.

In review of the 2015 data quality, no changes or updates are required for the current QAPP (Chelan PUD, 2010). Chelan PUD will continue to follow and implement the Ecology and the FERC approved QAPP for the 2016 water quality data collection season.
