I believe and hope that the PUD a publicly owed energy company first responsible is the health and safety of its people and environment.

Research from sources that aren't compromised with bias or in alliance to energy companies or government agencies have proven that biology is adversely effective when exposed to RF Radiation microwave frequency.

Dr Samuel Milham

was one of the first scientist who alerted the world , linking electromagnetic pollution to human disease. He is the author of the books Dirty Electricity & Electrified the Disease of our civilizations.

Even the American Cancer Society states that RF Radiation Microwave frequency in Smart Meters has enough to move atoms in molecules or cause them to vibrate. The Agency for Research on Cancer ARC classifies RF Radiation as a possible carcinogenic to humans and goes on to say it is possible that smart meters could increase cancer risk!

In America we see a lot of misinformation about the safety of RF Radiation coming from corporation that benefit financially from Smart Meters. Just as we saw the Tobacco Industry hide it's research on the harmful effects of Tobacco.

Almost everywhere Smart Meters have been deployed a percentage of the population begins to experience symptoms, such as tinnitus, headaches , sleepless, fatigue, heart palpitations, nose bleeds & pacemaker malfunction. These people our the Canaries in the the coal mines.

In Sweden where Electro Sensitivity is officially recognized doctors there claim this is what happens when people are constantly exposed to RF Radiation that Smart Meters emit.

Companies like PG&E state that Smart Meters emission are below the supposed safe levels. However they fail to tell you the FCC guidelines our obsolete and do not cover long term low level exposure from RF Radiation..

Doctors interview in the documentary "Take Back Your Power"took blood tests and linked Smart Meter exposure to chronic inflammation which could lead to serious diseases!

Health issues aren't the only disbursing by products of Smart Meters. there has been many Smart Meters that exploded and or caught on fire. Some insurance companies won't cover the damage. Is the PUD going to take on those Liabilities?

Is the PUD going to guarantee that these devices won't be used to collect personal data that could be shared with anyone including governmental agencies?

In today's environment with water and air pollution, contaminated foods, stress from too much EMF cell phones computers is it really in the best interest for the public to place another stress on our biology and environment?

This technology isn't Smart it's Dumb.

If the commissioners decide to implement

These Dumb Meters are our they going to be financially and emotionally accountable for any damage or harm created by their decision?

I hope you fully move into your heart before making such a important decision!
