

ACCESS TO THE VISITOR CENTER AT ROCKY REACH PROJECT
AND ENHANCED SECURITY

In the aftermath of terrorist attacks on the United States on Sept. 11, 2001, federal agencies including the Federal Energy Regulatory Commission and the Department of Homeland Security have requested heightened levels of security for facilities deemed to be part of critical infrastructure of the United States.

Hydroelectric generation projects are part of that infrastructure.

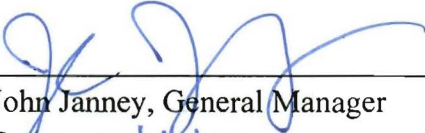

Because of the educational and informational value of maintaining public access to the public-owned hydroelectric generating facilities of Chelan County PUD, security measures have been instituted that provide an increased level of protection for PUD staff and visitors while maintaining public access to the visitor's center which is located within the Rocky Reach hydroelectric project.

Security measures have been implemented that require:

- Screening all visitors through a guard station at the entrance to the grounds and through a metal detector at the visitor center
- Restricting containers and packages/bundles that may be carried into the visitor center and other areas located on or within the hydroelectric facility.
- Prohibiting weapons from being carried into the visitor center.
- The District is not responsible for any items left in vehicles. The District does not provide storage for prohibited items.

Entry onto the grounds at Rocky Reach is a voluntary activity. Anyone objecting to any of these security provisions may leave the grounds without being subject to a search.

These security provisions are deemed necessary in order to achieve a level of security appropriate for protecting vital utility infrastructure of the region and safeguarding the general public welfare.
