What:
Chelan PUD is rebuilding a 1.5 mile section of overhead power line between Jagla/Edgemont Roads and Cranmer Road this summer. This work is part of a three-year project to upgrade the power line along Wenatchee Heights to improve the distribution system.

Why:
• Increased system capacity and reliability in this high wind area.
• Faster power restoration during outages.

Scope:
• 1.5 miles of new line
• 30 new poles
• Excavation and soil removal - disturbed landscaping will be restored after construction
• Minimal disruption of local traffic
• Noise and dust during daylight work hours
• Coordination with PUD fiber, Frontier and Charter utilities required for transfer to new poles
Cost:
Estimated at $250,000 (does not include costs for other utilities to transfer to new poles)

Timeline for building overhead system:
• Planning: Completed April 2013
• Construction: June-September 2013
• New line energized: By end of December 2013
