Project fact sheet

Okanogan Ave. Final Substation Connections

WHAT:
Chelan County PUD completed construction of Okanogan Substation in spring 2013. Trenches were dug and conduit was installed in the red highlighted area in Sept. 2013. PUD crews will now pull electrical lines through the conduit, install equipment, and make final electrical connections to the substation.

WHY:
This work is necessary as a final phase of the project to serve electric load growth and the need for capacity in the area.

SCHEDULE:
- Weather permitting, PUD crews plan to begin the week of Jan. 6 and work should last about 2 months
- Working times are generally Monday through Friday, 7 a.m. to 3:30 p.m.

OUTAGES:
- Short, planned outages may be scheduled
- Affected customers will be notified prior to the outage

THINGS TO KEEP IN MIND:
- Periodic traffic revisions, with one-lane closures may cause short delays
- Customers located on Okanogan Avenue between the substation and Circle street will have access to driveways
