

HPI SAFETY MINUTE

July 6, 2021

Board of Commissioner's Meeting

Katie Marcoux
IH/Safety Coordinator

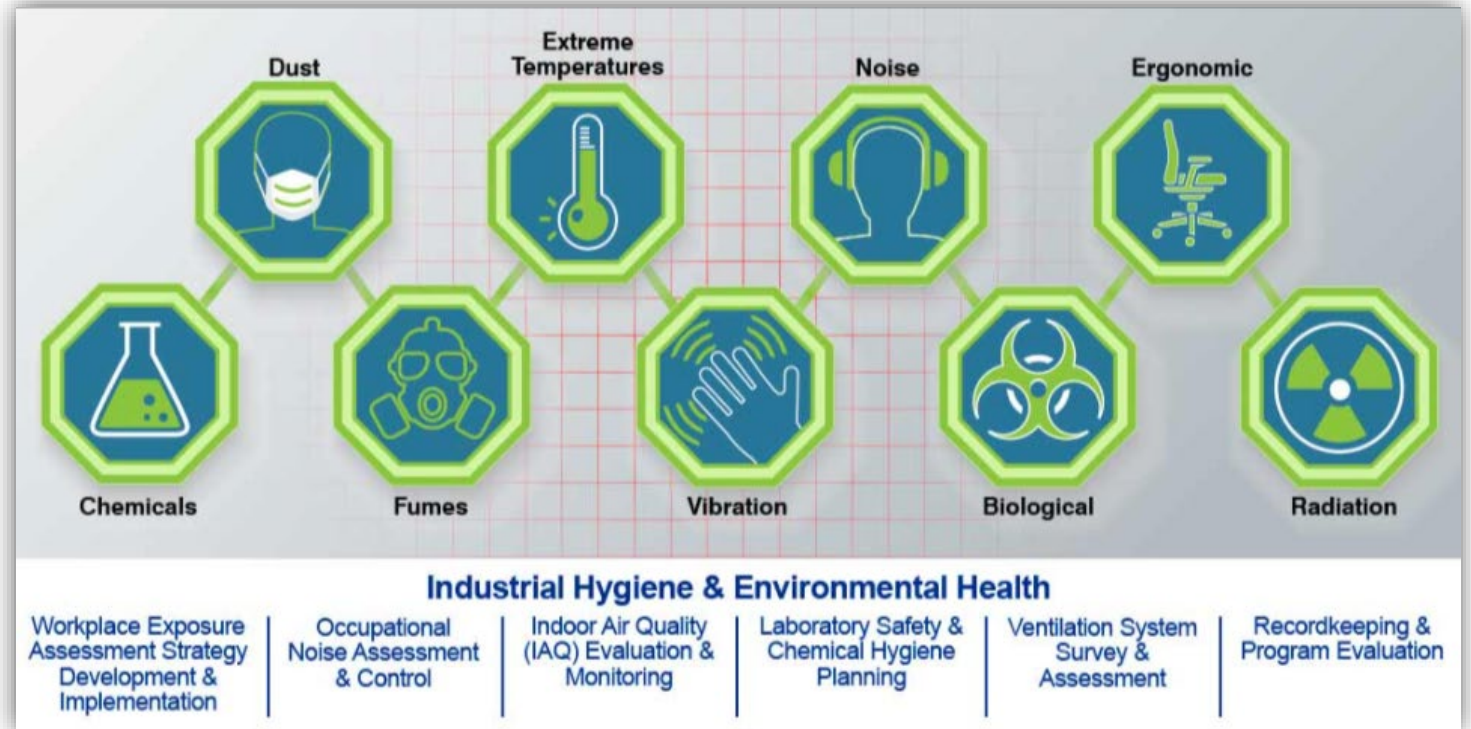

What is Industrial Hygiene?

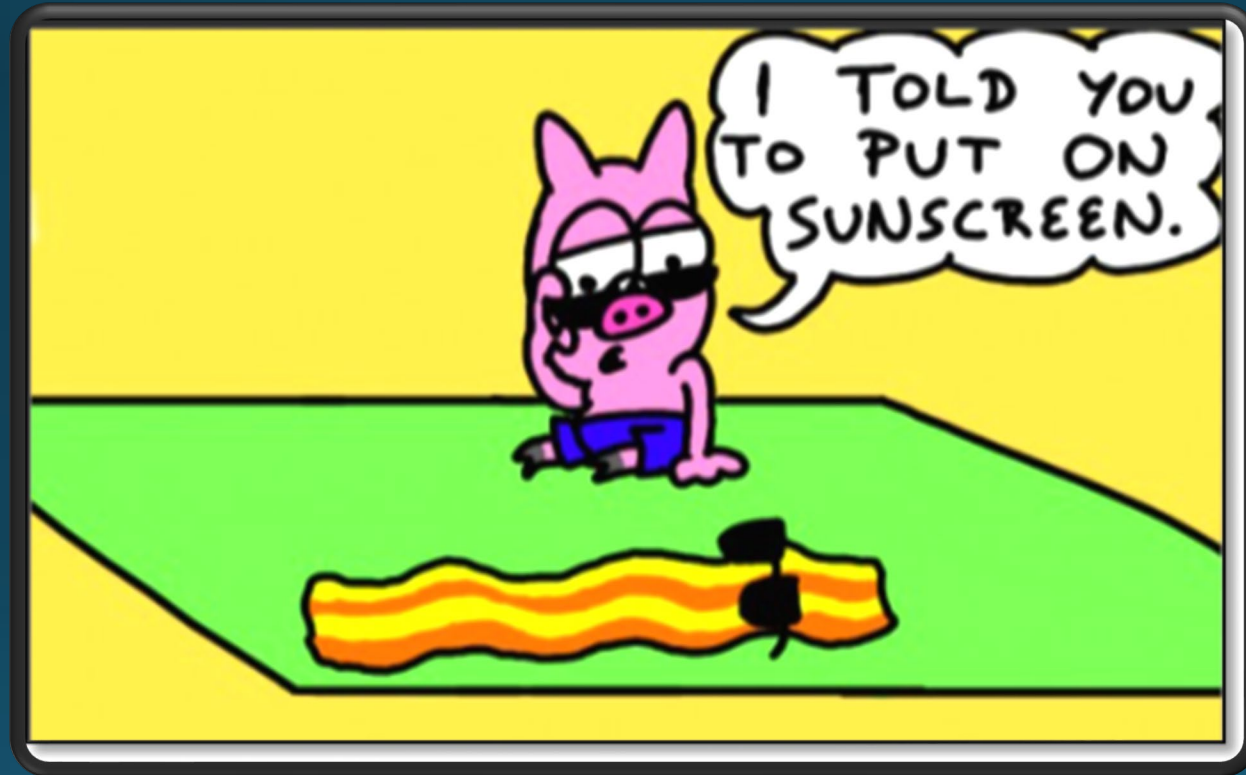

*Industrial Hygiene has been defined as “that science and art devoted to the **anticipation, recognition, evaluation, and control** of those environmental factors or stresses arising in or from the workplace, which may cause sickness, impaired health and well-being, or significant discomfort among workers or among the citizens of the community.”*

- Identify tasks
- Assess risks
- Monitoring
- Identify controls
- Implement controls
- Train employees
- Assess performance
- Investigate issues
- Maintain data & reports

Protecting employee's health & well being by reducing & eliminating exposure to:

..So how do I use HPI?

HPI anticipates what human errors can take place on a job and puts defenses in place that can reduce errors and injuries.

How do we put the proper defenses in place?

HPI Philosophy & Principles	Through continual learning, we constantly improve the defenses that protect us from the errors all of us can make	
	1	We all make errors – it's a matter of when, not if
	2	These errors follow a recurring pattern, and are predictable and manageable
	3	Curiosity drives us to examine our practices and learn from our errors
	4	As employees, we are the solution, not the problem
	5	Excellence is not the absence of failure, but the presence of process and defenses
