Transmission & Distribution Material Stock Catalog

**New Material Evaluation Procedures**

Originator: DSmith Date: 5/10/2007

Approval: R Phillips Date: 4/25/2012

Page 1 of 4

Revision: Updated contact info

STD Committee: 4/25/2012

1. New Material Evaluation

1.1. Recognizing that new materials may provide improvement in design, construction, and maintenance for more cost effective construction, the District will evaluate such materials so that their use can be properly implemented and determined if they meet District Standards.

2. Scope

2.1. The Material Evaluation procedures outlined herein are applicable to all new materials submitted for consideration to the District for use in T&D construction and maintenance projects.

2.2. New materials are those, which have never been used or have been used on a limited basis without sufficient documentation or performance evaluation, except those specified on special contract documents.

3. Standards Committee

3.1. The Standards Engineer is responsible for administering this policy through the T&D Standards Committee. The Standards Committee is comprised of representative of the following areas.

- Engineering Standards
- Customer Service Engineering
- T&D Warehousing
- Purchasing District
- Electric Shop
- T&D Operations Supervisors
- T&D Journeyman Linemen
- Transmission, Substation or Distribution Engineers

4. Procedure

4.1. The Standards Department has been charged with the responsibility of coordinating the evaluations of new materials. The request for evaluation may be made by contractors, manufacturers, suppliers, consultants or District personnel, hereinafter referred to as the vendor.

4.2. The vendor is required to supply requisite information demonstrating the properties and performance of the material. At a minimum, the submission shall include the following:

**New Material Evaluation Procedures**

Originator: DSmith Date: 5/10/2007

Approval: R Phillips Date: 4/25/2012

Page 2 of 4

Revision: Updated contact info

STD Committee: 4/25/2012

4.2.1. One copy of the completed form "T & D Material Evaluation" located on the last page of this document.

4.2.2. Pertinent technical data and test results which support use of the material and a statement identifying the uses and the cost benefit versus alternate materials.

4.2.3. If there are safety considerations or other restrictions or limitations on the use of the material, they should be stated and supplied also.

4.2.4. Additionally, if the material is a material developed through engineering design, the engineering calculations should be submitted.

4.2.5. Any additional information, material brochures, testing reports, etc., that you feel is pertinent to the evaluation of your material/procedure

4.2.6. Please do not submit any samples at this time. Should field or laboratory testing be needed you will be contacted and the samples requested.

4.3. Initial Evaluation

4.3.1. The submission will be reviewed by the T & D Standards Engineer. Materials not considered acceptable for further evaluation will be rejected at this point without further evaluation and the vendor so notified. Materials with questionable benefit or limited application by the District will be put on hold and the vendor so notified. Some materials require field-testing to fully understand their benefits. Should this be the case, the material/procedure will be moved to a "Long Range Evaluation Process" and its progress monitored.

4.3.2. All chemical products must be accompanied by a MSDS.

4.3.3. Our evaluation may include a review of technical and test data, visual inspection of the item, discussion in Standards Committee(s), field evaluation by electrical workers, inquiries to other utilities, and laboratory testing.

4.3.4. Some items require approval by our Environmental or Safety departments. The process may take several months.

4.3.5. Vendors will be informed of our decision at the end of the process.

New Material Evaluation Procedures

Originator: DSmith Date: 5/10/2007

Approval: R Phillips Date: 4/25/2012

Page 3 of 4

Revision: Updated contact info

STD Committee: 4/25/2012

4.3.6. Materials with potential benefit and application will have the findings and recommendations presented to the T & D Standards Committee for action.

4.4. Standards Committee Evaluation

4.4.1. The Committee shall further evaluate the information furnished and determine if any additional information, reference, sample material or material, testing or clarification is needed.

4.4.2. With complete information, the Committee shall evaluate and make recommendations as follows:

- APPROVED
- NOT APPROVED
- MATERIAL MEETS CURRENT SPECIFICATIONS
- NON - INTEREST or LIMITED USE ITEM

4.5. The vendor will be notified of the recommendation.

4.6. Acceptance of a material is in no way to be construed as a commitment to purchase, recommend, or specify a particular material.

5. Implementation

5.1. Upon request of the design personnel, the Standards Engineer will add the appropriate mfg part numbers to the existing Material Catalog Sheet or develop a new Material Catalog Sheet.

5.2. If appropriate, the Districts estimating system will be modified to allow inclusion of this material into T & D projects.

5.3. The use of the material is the responsibility of the project engineers.

6. Updating / Re-evaluating

6.1. As do several other area electric utilities, we generally do not re-evaluate items that have failed testing or have otherwise been rejected or removed from approval until a period of three (3) years has elapsed. Any exceptions to this policy are at our sole discretion.

6.2. The most current copies of all material specifications or catalog sheets are available on our web site.

6.3. You may always phone or e-mail to ask questions. The Standards Department tries to be helpful and fair, and we endeavor to approve as many qualified suppliers of products as is practical.

**“OR EQUAL” DEFINITION**

Originator:
DSmith

Date: **5/30/2007**

Approval:
DSmith

Date: **5/30/2007**

Page 1 of 1

Revision: **NEW**

STD Committee: **5/30/2007**

Application: This document defines the Approved Manufactures Part Numbers and “OR EQUAL” relationship.

Definition of "Or Equal":

1. **OR EQUAL** - Contractor-proposed substitution of specific materials or processes that are deemed by the District, in its sole discretion, to be equal in every material respect.
2. Offers of substitution for items described in the Contract Documents as "Or Equal" will be considered only upon the written request of the Contractor, and no requests for substitutions will be acknowledged or considered from suppliers, distributors, manufacturers, or Subcontractors or any other source. Requests for approval of substitution shall be made by following District Standards #0000.01 “New Material Evaluation Procedure”.
3. NO PURCHASE SHALL BE MADE OR INSTALLATION PERFORMED BY CONTRACTOR WITHOUT APPROVAL OF THE DISTRICTS STANDARDS DEPARTMENT.

INSTRUCTIONS

How to Use The Material Catalog

Originator: **DSmith** Date: **7/6/2007**

Approval: **DSmith** Date: **7/6/2007**

Page 1 of 1

Revision: **NEW**

Approved

1. Introduction

- 1.1. The *Material Catalog* lists all items that District regularly stocks in warehouses and includes product descriptions organized by product categories and approved manufactures catalog numbers.
- 1.2. This information is updated on a daily basis and is used for Purchase Requisitions.

2. Adobe Portable Document Format (PDF)

The web site documents are published in the Adobe® Portable Document Format (PDF). You will need to download and install a free copy of Adobe Acrobat Reader to view the documents. Go to <http://www.adobe.com/products/acrobat/readstep2.html> if you have not already installed Acrobat Reader.

3. Document Features:

3.1. Bookmark

On the left side of the page is a section entitled “Bookmarks”. These bookmarks allow you to jump to a particular section or page easily.

3.2. Search

You can access the search function by mouse clicking on the binocular icon. Using this function, you can search for:

- Maximo Stock Number
- Manufactures Name
- Manufactures Catalog Number
- Any text or number

3.3. Printing: You can print all two hundred pages or any single page. The default is printing all pages so be careful.

Clamp, Cushion Grip, Suspension Shoe

Originator: Randy Kono Date: 10/13/11

Approval: J. Flader Date: 5/14/13

Page 1 of 1

Revision: **Revised manufacturer Catalog #**

Std's Committee Approval:
Approved

Application: CUSHION-GRIP Suspensions are intended for use on all aluminum based (AAC, ACSR) conductors, and are designed to reduce the static and dynamic stresses at the support point so that the conductor is protected against the effects of oscillations. The conductor is cushioned by field proven, integral elastomer inserts, which guard against abrasion, wear, and fatigue.

Common Name: CUSHION-GRIP Suspension Shoe

Approved Manufacturers: Preformed Line Products

- 3) Rated for 125° C continuous operation.

**Clamp, Ground Rod**

Originator: DSmith

Date: 7/7/2006

Approval: DSmith

Date: 6/20/2007

Page 1 of 1

Revision: **NEW**

Stds Committee Approval:

Approved

Application: Ground rod clamp is used to connect the pole ground wire to either copper jacketed or galvanized ground rod. Unit shall be capable of being torqued to 75 foot-lbs without breaking.

Specification: The ground rod clamp shall be suitable for connecting wire ranging from #6 to #2 AWG solid Copper to a ground rod.

Material: Ground rod clamp shall be manufactured from a cast bronze alloy.
Ground rod clamp shall be supplied with a bolt manufactured from a non-ferrous metal.

Bolt: Shall have 9/16 inch hexagonal head

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part and its packaging.

Bolted Vise Type Tap Connector for Copper Conductor

Originator: DSmith

Date: 7/7/2006

Approval: J Mitchell

Date: 8/23/2011

Page 1 of 1

Revision: Removed Richards from #1 sol and #2 str

Std Committee Approval: Approved

Application: Vise type connectors are used to tap copper conductors. For copper to copper connections-Splice, Loop dead-end or service entrance tap or grounding connections. This type of connector can be installed or removed "hot" with use of a special hot stick.

Specification:

Material: Body—Copper Alloy

Hardware—Stainless Steel or Silicon Bronze al

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

**Conductors, Compression,
Tap, H-Type Wide Range
for AL/AL or AL/CU**

Originator: DSmith

Date: 5/24/2018

Approval: J. Mitchell

Date: 5/24/2018

Page 1 of 1

Revision: Updated catalog numbers; added 015598

Stds Committee: **Approved**

Application: The "H" type wide range compression connectors are used to make tap connections at secondary voltages. The connector can be used for joining aluminum or copper using "O" or "D" dies in standard tools.

Ordering Description: Compression tap connector, wide range for aluminum and/or copper conductor. Stranded wire range (A groove) to (B groove).

Strength: Connectors shall meet Class 2 Requirements of ANSI Standard C119.4, latest revision.

Material: Connectors shall be made of E.C. grade aluminum and pre-filled with approved inhibitor. Interior surfaces of conductor grooves shall be serrated to grip conductors.

Compression Dies: Connectors shall be suitable for installation using 5/8 BG (or) "O" or "D" dies.

Packaging and Marking: Connectors shall be individually packaged in a container suitable for easy handling and storage. Each container shall be marked with manufacturer's name, catalog number, wire ranges and die codes. The universal code number shall appear in "Shadow Form" on the face of the box or on the box flap.

TERMINAL PAD, COMPRESSION

Originator: DSmith

Date: 5/3/2016

Approval: J. Mitchell

03/29/2016

Page 1 of 2

Revision: Updated description for 050460r

Std's Committee Approval:

Approved

Application: Used to transition between conductor and NEMA 1, 2 or 4 hole pads. Due to Compression tooling restrictions only use Hubbell/Anderson lugs for the larger sizes. Suitable for AAC, ACSR, or Copper Conductor as shown.

Specification: Material: Aluminum, tinned aluminum or Bronze

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

TAPS, COMPRESSION, WEJTAP AND POWER BOOSTER

Originator: DSmith

Date: 2/13/2015

Approval: J. Mitchell

Date: 2/17/2015

Page 1 of 2

Revision:
Removed STK# 032635

Stds Committee Approval:
9/22/06

Application: WEJTAP connectors use an aluminum alloy wedge that is power-driven between the run and the tap cables locking them into a "C" shaped tempered aluminum alloy spring-body. The spring-body maintains pressure throughout the life of the connection to ensure reliability during severe electrical and climatic conditions.

Specification: The District has standardized on Burndy as a sole source for this product due to tooling issues.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

Approved Manufacturers: Burndy Only

Approval: J.Mitchell

Date: 8/13/2014

Page 1 of 1

Revision: CORRECTED ITEM #

Stds Committee Approval:

Approved**Application**

Automatic splicing sleeve shall be full tension, straight-line, for splicing copper conductors.

Salvage Instructions

Automatic sleeves for copper shall not be reused except to readjust during initial installation.

Specifications:

Construction: Connectors shall be flare mouth design.

Strength: Connector shall be capable of holding conductor to 95% of the conductor breaking strength.

Material: Connector shall be constructed of copper tubing with bronze jaws that are inhibitor loaded.

Packaging & Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's catalog number shall be on each part and its packaging.

Application: Used to splice two overhead conductors together. Conductor may be same or different sizes. Initial tension representing 15% of the Conductor Rating is required to assure a permanent low resistance electrical connection. Used on ACSR, AAC and AAAC Conductor.

Common Name: Automatic Sleeves

Specifications: Each unit shall be rated to hold a minimum of 95% of the rated breaking strength of the conductor. Each unit shall be made of high strength aluminum alloy and contain inhibitor compound.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

Weld Material

Application:

Consists of a mold filled with weld material and then ignited to produce a permanent, low resistance connection in substations. Connections shall suitable for exposure to the elements or direct burial without degradation over the lifetime of the grounding system.

General and Safety Instructions:

1. Welding material is an exothermic mixture and reacts to produce hot molten material with temperatures in excess of 1400°C (2500°F) and a localized release of smoke. These materials are not explosive. Ignition temperatures are in excess of 900°C (1650°F) for welding material.
2. Make connections in conformance with Manufactures instructions and all governing codes.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

Revision: Changed 9" to 6" stinger

Stds Committee Approval:

Approved

**#2 - 4/0 Concentric Neutral
Jacketed Cable**

Application: This primary cable terminator shall provide a weather tight seal to connect 15 kV jacketed concentric neutral cables or tape shield neutral cables to overhead distribution facilities. It shall be suitable for Indoor & outdoor installations.

Specification: This skirted termination kit shall be designed for jacketed UG cable, and contain all necessary components for cable termination including silicone molded rubber termination, connectors (if specified), rubber tape, clips, springs, ground braids (if required), silicone grease and 1 instruction sheet.

The insulators shall be pre-stretched around a spiral -wound, plastic core. When the terminator is slipped over a properly prepared cable and the core is removed, the terminator immediately shrinks to the cable's dimensions. The result is a void-free, flexible seal without special tools or torches.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

With Test Point and
Integrated Jacket Seal**

Originator: D. Smith

Date: 9/14/2010

Approval: J. Mitchell

Date: 11/30/11

Page 1 of 1

Revision: Removed Elastimold from approved standards due to operational problems.
Updated Cooper Catalog Number. Removed Hubbell. Changed title.

Std's Committee Approval:

Approved

Application: The 200 amp loadbreak separable elbow-bushing connector is suitable for connecting URD underground cable to URD transformers and switchgear. It provides a grounded, deadfront, submersible cable connection. Loadbreak and load make operations require the aid of a live-line tool (shotgun stick with elbow puller).

Specification: The loadbreak elbow will be supplied with voltage test point and pulling eye. The elbow male contact rod and the threaded cable compression connector shall be designed to assure a secure, low resistance connection. Bi-metallic construction is required for the connector, with aluminum crimp tube and copper threaded to accept copper contact rod. The connector shall be prefilled with inhibitor. The loadbreak elbow shall meet all the requirements of ANSI/IEEE 386 - latest revision. A method of sealing the elbow to the URD cable shall be provided by a built in jacket seal.

Voltage Rating: The elbow and bushing shall be capable of closing on or opening full phase-to-phase voltage.

Current Rating: The elbow and bushing shall be capable of conducting 200 amps continuously and 10,000 amps for 10 cycles momentary or during fault closure at maximum phase-to-phase voltage.

Packaging and Marking: Items shall be suitably packaged to prevent damage in separate polyethylene bags. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

Approved Manufacturers:

NON-LOAD BREAK
UG CABLE TERMINATION SYSTEM**

Originator: DSmith

Date: 4/10/2007

Approval: J Mitchell

Date: 11/30/2011

Page 1 of 3

Revision: **Updated Cooper Catalog #'s**

Std's Committee Approval:

Approved

Application: The 600Amp 15kV rated LRTP Deadbreak Termination System is designed to connect medium voltage UD cable to switchgear, transformers, sectionalizing cabinets and UD vault applications. It is fully compliant with IEEE-386 Standard and mates with bushing components that also comply with the IEEE-386 Standard.

The LRTP system uses a threaded compression lug allowing the LRTP to be threaded into the T-body forming an integral termination system. The LRTP system is ideal for applications where the termination will be moved to achieve a visible break and ground. The integral termination system, T-body and LRTP as one unit, makes it easier to install and remove from the mating bushing interface. This interface allows for live test, phasing and visible ground. In addition, it can be used to add a tap, or install an Arrester Elbow to protect the system from voltage surges.

Common Name: Hammer Heads

Item #	Application	
1	T-Body - The Deadbreak Elbow is designed to terminate power cables with copper or aluminum conductors ranging in sizes from #2 AWG to 1250MCM. It may be installed on any 600 amp rated (aluminum) or 900 amp rated (copper) deadbreak apparatus bushing that meets IEEE Standard 386 latest revision for Separable Insulated Connectors.	
2	LRTP - The 600/900 amp LRTP is designed to tap a 200 amp loadbreak interface device to an existing 600/900 amp deadbreak using a bolted connection. A common application is for grounding and isolating 600/900 amp systems. The LRTP is fault-close rated to 10,000 amps and complies with IEEE 386.	
3	Connector Compression , Copper Top Threaded This is a bimetal compression connector that is thread with a 15/16 hole.	
4	Cable Adapters accommodate power cable insulation diameters from 0.530 to 1.935 inches	
5	Insulating Protective Cap - The insulating cap isolates unused 600 amp interfaces.	
6	Connecting Plug is required exclusively for applications involving the joining or connecting of two or more molded 600 elbows. Wrench holes are provided to tighten the Connecting Plug into a 600 or 900 amp Deadbreak Elbow by using a standard spanner wrench.	
7	Basic Insulating Plug with Cap - The Basic Insulating Plug is required to secure the molded rubber 600 amp elbow in place.	
8	The Torque Tool is required to check the torque of a 15 kV Class T-OP II deadbreak connector or bushing adapter when it is installed on a 600 A bushing interface. It is precision calibrated and shotgun stick operable.	
9	T-WRENCH , The T-Wrench is used to install the Loadbreak Reducing Tap Plug into the Bushing Extender.	
10	SHIELD ADAPTERS/SEALING AND GROUNDING KIT Used for cold shrink sealing and grounding tape shielded cables.

Item 1. 600A Deadbreak /200A Loadbreak

Application: Installed in UG sectionalizing vaults and provides transition from 600 amp connections to 200 amp.

Specification: Provided with protective covers and universal stainless steel mounting brackets that can provide mounting angles from 0 to 90 degrees. Two single stainless steel parking stands shall be provided per junction bar for mounting on each end. All current carrying components shall be copper. The universal 200Amp bushing wells shall have replaceable electroplated high strength chromium copper studs.

NOTES:

These junction bars do not come with 200Amp bushing inserts (Stock #045870), each unit requires four inserts.

Page 1 of 1

Revision: Added Orange cover with no drain wire

Stds Committee Approval:

23 April 2023

Application: Used to insulate and shield energized 15kV bushings.

Specification: The Insulated Protective Cap is an accessory device designed to electrically insulate and mechanically seal loadbreak bushing interfaces. When mated to a loadbreak product (and the drain wire is attached to ground on the ground wire style), the Insulated Protective Cap provides a fully shielded, submersible insulating cover for energized bushings. The cap can be used for permanent or temporary installation on bushings, junctions or feed through devices that meet the requirements of ANSI/IEEE Standard 386.

Each package shall contain:

- Protective Cap
- Silicone Lubricant
- Installation Instruction Sheet

Applicable Standards: All separable connectors shall be designed and manufactured to ANSI/IEEE Standard 386 and tested in accordance with IEEE 386, IP67, and ASTM F712.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

Application: Used for providing multiple set screw terminations for padmounted transformers. Designed to slip on the transformer stud and then tightened with a single set screw to facilitate changing out the transformer without having to remove all secondary services.

**Specification:**

- Dual-rated connectors for aluminum or copper conductors
- Clear plated for low-contact resistance.
- Fully tested to ANSI C119.4 for Class 'A' connectors.
- Supplied with radial-tipped set-screw.
- Connector fabricated from 6061-T6 aluminum alloy for conductivity and strength.
- Includes Oxide Inhibitor grease.
- Street light tap

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

**Bushing, 15kV 200 Amp Loadbreak
Feed Thru**

Originator: D. Scott

Date: 5/5/2016

Approval: J. Mitchell

Date: 05/04/2016

Page 1 of 1

Revision: New

Stds Committee Approval:

Approved*Horizontal Feed-Thru**Vertical Feed-Thru*

Application: Feed thru bushings are used to sectionalize cables or for making taps.

Specification: The bushing shall meet all the requirements of ANSI/IEEE 386 - latest revision. Feed thrus must be equipped with a bracket for mounting onto a standoff bracket. Units must be hot stick operable, and provide a means to test, ground, park, bypass a transformer or add an arrestor. The units are to be made with a stainless steel mounting bracket. The eyebolt must be high strength stainless steel and the acorn nut must be silicon-bronze.

Voltage Rating: The bushing shall be rated 15 kV and shall be capable of closing on or opening full phase-to-phase voltage (load break). The unit shall be rated at 95 kV BIL or higher, a corona extinction (3pc) of 11kV, AC 1 minute withstand voltage of 34 kV, and DC 15 minute withstand voltage of 53 kV.

Current Rating: The elbow and bushing shall be capable of conducting 200 amps continuously and 10,000 amps for 10 cycles momentary or during fault closure at maximum phase-to-phase voltage.

Packaging and Marking: Items shall be suitably packaged to prevent damage in separate boxes (1 per container). The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

Approved Manufacturers:

Approval:

Date: 4/26/2023

Page 1 of 1

Revision: **NEW**Stds Committee Approval:
25April2023**Application:**

This specification applies to fiberglass crossarms for tangent, dead-end and alley arm applications for distribution cross arms mounted onto round or flat electrical power poles.

Standards: ASTM A36, A153, D635, D4364, G154, G90.

Fiberglass Arm Construction and Materials: Must be high quality fiberglass material. The arm must be grey in color. The pultrusion process must include precise fiberglass positioning, with no wrinkles or micro-cracks in the beams or corners. An ultraviolet inhibitor shall be added to the polyester resin mixture for UV protection and to prevent fiber bloom. The UV coating shall be a minimum of 1.5 mils thick. Coating shall be tested in accordance with ASTM G154 for a minimum of 10,000 hours with no degradation. The cross arm shall be foamed filled with a closed-cell high density urethane to prevent water ingress. The foam shall adhere to the sidewalls and completely fill the arm. The arm shall have internal reinforcing inserts at all factory drilled bolt holes unless the manufacturer can show no deflection in the arm under load and the arm can handle a minimum of 50 pounds of torque on the bolts. The arms shall be field drillable without the need for hole inserts, special tools, or other supplies. Cross arms shall be sealed at the ends with internally mounted impact resistant end caps

Dead end arms shall be supplied with eye bolts vertically oriented on each side of the arm, that have a strength rating greater than the fiberglass arm.

The mounting bracket and hardware shall be made of high strength, heat treated aluminum alloy, hot-dipped galvanized steel, thermally diffused galvanized steel, or ductile iron. Mounting bracket holes must be able to accommodate Chelan PUD's ¾ inch pole mounting bolts. All bolts, nuts, and other hardware shall be hot-dipped or thermally diffused galvanized steel. A guy attachment is required on dead end cross arms. Each cross arm shall be fully assembled at the factory and ready for installation. The manufacturer shall supply and install all hardware such as dead-end attachments.

If possible, Chelan PUD prefers each specific style of cross arm to be identical to Avista's arm. Avista approved drawings shall be submitted with proposals.

Electrical Characteristics: Must have an average BIL of no less than 15 kV per inch, and an average wet BIL of no less than 12 kV per inch.

Approved Manufacturers: Pupi, Alumaform, Shakespeare.

Application: These devices provide for automatic +/- 10% regulation of primary voltage on the Districts distribution system.

Specifications: Refer to equipment specification #1211.01 for detail information. This specification covers electrical, mechanical and safety features and characteristics of outdoor, single phase, oil immersed, 60 Hz, 65°C temperature rise by resistance, self cooled and force-air cooled step-type voltage regulators.

The voltage regulators must be completely self contained and provide +/- 10% voltage regulation in thirty-two (32) steps of 5/8% each. The voltage regulator shall be of a sealed tank design that will allow operation at 65°C without increasing the oxidation rate of the oil.

The basic impulse level (BIL) shall be 95 kV. The nominal system voltage will be 12,470 GRD Y/ 7200 volts. Single-phase operation shall be at a nominal voltage of 7200 volts.

Standards: - The regulators furnished under this specification shall be designed, manufactured, and tested in accordance with ANSI Standard C57.15, latest revision thereof. That standard shall be a part of this specification

Shipping: Refer to equipment specification #1211.01

Reference: Refer to Material Catalog #1211.02 for controls information.

Approved Manufacturers: Cooper, Siemens

	Single-Phase Step Voltage Regulator – PAD			1211.03
	With a Communication-Ready Control Panel			<i>Page 3 of 13</i>

1 GENERAL

1.1 This specification covers electrical, mechanical, and safety features and characteristics of outdoor, pad-mounted, single-phase, oil immersed, 60 Hz, 65°C temperature rise by resistance, self-cooled step-type voltage regulators. The voltage regulator must be completely self-contained and provide $\pm 10\%$ regulation in thirty-two (32) steps of approximately 5/8% each. The voltage regulator shall be of a sealed tank design that will allow operation at 65°C without increasing the oxidation rate of the oil.

1.2 STANDARDS

1.2.1 The regulators furnished under this specification shall be designed, manufactured, and tested in accordance with ANSI Standard C57.15, latest revision thereof. That standard shall be a part of this specification.

1.3 RATINGS

1.3.1 All ratings shall be for 60 Hertz alternating current, oil-immersed, air-cooled voltage regulators capable of continuous operation at rated kVA without exceeding a 55°C average temperature rise above 40°C ambient at its rated current with a 10% raise or 10% lowering of tap positions, Type A regulators.

1.3.2 The basic impulse level (BIL) shall be 95kV. The nominal system voltage will be 12,470 GRN Y/7200 volts. Single-phase operation shall be at the nominal voltage of 7200 volts.

1.3.3 The BIL of the Bushings shall meet or exceed 95 KV.

1.3.4 Ambient temperature – minus 30°C to plus 50°C.

1.4 The voltage regulator voltage and capacity will be specified in the purchase order.

2 CONSTRUCTION

2.1 PRESSURE RELIEF DEVICE

2.1.1 All voltage regulators shall be designed with a mechanical, self-resetting pressure relief device releasing all excessive pressure build-ups without damage to the tank and venting between 4 PSIG and 10 PSIG.

2.1.2 All voltage regulators shall be equipped with a pressure relief device (Model 202-032-1 or District approved equivalent). Threads shall be sealed with pipe dope.

2.2 VOLTAGE REGULATOR OIL

2.2.1 Voltage regulators shall be insulated with new (unused) mineral oil. The oil shall meet the requirements of ANSI C57.12.00, Article 6.6.1 (1), ANSI C57.106 and ASTM 3487 Type II.

2.2.2 The voltage regulator nameplates shall indicate that the PCB content of said voltage regulator is less than 1 PPM or that at time of manufacture gas chromatographic analysis certified non-detectable PCB.

2.2.3 The oil shall be inhibited mineral oil containing 0.2% by weight DBPC.

2.2.4 The nameplate shall show the gallons of oil.

2.3 HIGH VOLTAGE BUSHINGS AND TERMINALS

2.3.1 Voltage regulators shall be equipped with identical and interchangeable bushing wells and corresponding load break inserts on the S and L bushings.

2.3.2 For regulators rated at 200 amps or less, the bushing wells shall be externally clamped, 200-amp rated, separable, and rated for primary switching per IEEE 386. The bushings shall conform to ANSI C57.12.25, Type II arrangement. Regulators larger than 200 amps shall have 600-amp bushings.

2.3.3 The load-break bushing inserts shall be Eaton-Cooper Power Systems LBI 215 or Elastimold (Catalog NO. 1601A4).

2.3.4 Inserts shall be shipped with physically wired down & secured dust caps or use a dust cap equipped with a pressure relief hole to prevent pressure build up in the dust cap that would cause loss of the dust cap.

2.3.5 The bushing designations (S, L, or SL) shall be permanently marked adjacent to the associated bushings.

2.3.6 All regulators shall be provided with a metal oxide varistor (MOV) bypass arrester connected across the series winding.

2.4 VOLTAGE REGULATOR TANKS

2.4.1 Voltage regulator tanks shall be of sealed tank design with welded steel construction.

2.4.2 There shall be a tap changer switch mounted on the front plate that can change the control and differential PT taps external to the unit.

2.4.3 Single phase voltage regulators rated 250 kVA and smaller must fit on a 66 x 88 inch vault lid with an opening of 48 x 20 inches.

2.4.4 There shall be gauges indicating oil temperature and oil level in a separate compartment with the controller (not in the HV compartment).

2.4.5 A 1" drain valve with sampling device and a 1" upper fill port with a brass or silicon bronze NPT style pipe plug.

2.5 GROUNDING PROVISIONS

- 2.5.1 Voltage regulators shall be furnished with a total of 2 grounding lugs with a grounding bus installed voltage regulator ground provision, centered at the bottom of the HV compartment and spaced horizontally 8 inches or more apart.
- 2.5.2 The ground lugs shall be Fargo (Catalog No. BVC-207-FT) with thin brass jam nut, installed in horizontal position on pad-mount voltage regulator.

2.6 TAP CHANGER

- 2.6.1 The tap changing mechanism shall be a motor driven, quick-break design and it shall be completely oil-immersed.
- 2.6.2 The tap changer shall be able to go from full buck to full boost in under 25 seconds.

2.7 PAINT FINISH

- 2.7.1 The external parts of the voltage regulator shall have a primer coat of special rust resisting paint. The primer coat shall be followed by two coats of finish paint. All paint applied shall be highly resistant to oil and weathering. The finish coat shall be semi-gloss and ANSI Green (Munsell 7GY 3.29/1.5) per C57.12.28.
- 2.7.2 All finishes shall be certified to meet or exceed the latest revisions of ANSI C57.12.28.
- 2.7.3 The top of the voltage regulator shall have at least 3.0 mils of paint. The voltage regulator sides and bottom shall have at least 3.0 mils of paint. Complete painting of the inside is acceptable.
- 2.7.4 One One-Quart Can of touch up paint used for the final coat shall be shipped with each regulator.

2.8 BYPASS SWITCH

- 2.8.1 The voltage regulator shall be equipped with a bypass switch module inside the cabinet and allows the regulator to be removed from service without interrupting the continuity of the system.
- 2.8.2 The bypass module shall provide hot-stick operable sectionalizing switches and have bushings matching the regulator.

2.9 COMPARTMENTAL LOCKING

- 2.9.1 All hinged or removable cabinet access lids or doors shall have a three-point latch and be provided with a 9/16" stainless steel or silicon bronze Pentahead captive bolt locking device and provisions for padlocking. The Pentahead bolt shall be coordinated so that it must be engaged before a padlock can be inserted into or removed from the hasp.
- 2.9.2 All regulators shall meet the requirements for tamper-resistance of NEMA TR-1 and Western Underground Guide No. 2.13.

	Single-Phase Step Voltage Regulator – PAD			1211.03
	With a Communication-Ready Control Panel			<i>Page 6 of 13</i>

2.10 NAMEPLATES

- 2.10.1 Each regulator shall be provided with two nameplates mechanically fastened; one mounted on the control enclosure and the other mounted on the regulator tank. Nameplates shall be made of stainless steel or laser etched anodized Aluminum and permanently marked with essential operating data as specified in the latest revision of ANSI C57.15.
- 2.10.2 The voltage regulator nameplate shall specifically state that the voltage regulator is mineral oil filled and the number of gallons of oil it contains. The nameplate shall also indicate that the PCB content of said voltage regulator is less than 1PPM or that the time of manufacture gas chromatographic analysis certified non-detectable PCB.
- 2.10.3 All nameplates shall have the manufacturer's serial number bar-coded into the nameplate. Manufacture identification characters shall not be included as part of the barcode. This barcode shall be etched into the nameplate. The character size shall be ¼ inch. The barcode shall be minimum of ½ inch high and 2-1/2 inches wide.
- 2.10.4 The District also requests the following information be provided on similar nameplates located on both the control panel and tank.
- Impedance at the 16 raise position and rated kVA
 - Diagrammatic sketch of the windings
 - Untanking weight
 - Weight of tank and fittings
 - Weight and gallons of oil in use
 - Total weight
 - District purchase order numbers
- 2.10.5 There shall be a permanently stenciled note on the regulator stating that the regulator must be on neutral before operating the bypass switch.

3 RIV REQUIREMENT

- 3.1 The radio influence voltage shall not exceed 100 microvolts (average measurement) at 1000 kHz measured at 115 percent of rated voltage in accordance with NEMA Specification TR-1.

4 REGULATOR CONTROLS

- 4.1 The District approved regulator control panel is the latest version of the Eaton's Cooper Power series CL-7. The following setting and/or options shall be provided.

4.2 REVERSE POWER FLOW OPERATION

- 4.2.1 All voltage regulators shall be provided with reverse power flow detectors properly assembled on the unit. The reverse power flow detector shall be capable of detecting power flow in the reverse direction and insuring that the automatic voltage control of the regulator is sensing what is effectively the load or output voltage of the unit. A (source-to-load) differential potential transformer (PT) shall be supplied as part of this voltage regulator accessory. The addition of the PT shall also permit metering for reverse power flow conditions. The PT shall be located internally to the regulator tank.

4.3 TAP POSITION INDICATOR

- 4.3.1 An external position indicator shall indicate the tap changer position. There shall be a tap position reset button on the controller.

4.4 LIMITED OPERATING RANGE CAPABILITY

- 4.4.1 All voltage regulators shall include a feature that will permit additional current carrying capabilities at reduced regulation according to the following schedule:

Regulation (Percent)	CURRENT (% of 55°C Rating)
± 10	100
± 8.75	110
± 7.5	120
± 6.25	135
± 5	160

- 4.4.2 The adjustment for the load bonus device shall be located inside the faceplate of the tap position indicator to prevent inadvertent adjustment.

4.5 CONTROL PANEL

- 4.5.1 The regulator control panel shall be mounted in a weather resistant enclosure inside the accessory compartment.
- 4.5.2 The control panel shall be hinge-mounted and designed for easy replacement. The front panel shall be constructed to provide direct control interchangeability without requiring the removal of the control enclosure. Visible means shall be provided to de-energize the control and short the current transformer prior to testing or removal of the control.
- 4.5.3 All leads in the control shall be either color coated or labeled for easy identification.
- 4.5.4 All printed circuit boards shall be conformal coated for fungi and moisture protection.

- 4.5.5 A ratio correction transformer shall be provided inside the control enclosure to provide easy access to fine voltage adjustment. Ratio correction taps and corresponding system voltage shall be clearly identified on the regulator nameplates.
- 4.5.6 The regulator control panel shall be microprocessor based with an event recorder that has the ability to time stamp all events placed in the event recorder. The control panel shall have the ability to digitally meter with Class 1 accuracy, as defined in the latest revision of ANSI C57.15.
- 4.5.7 The control panel shall have USB update and download capabilities and be compatible with Cooper Proview NXG software.
- 4.5.8 The control panel shall operate properly over a temperature range of minus 40°C to plus 85°C.
- 4.5.9 A heater in the control panel box shall be provided to mitigate moisture concerns in the controller box.
- 4.5.10 The control panel shall have a digital communication port(s) located on the front panel. The port(s) shall allow trouble-free communications between a laptop (or personal computer or Data Reader) and the control panel. The successful Bidder at no additional cost to the District shall supply all accessories and software for trouble-free communications.
- 4.5.11 Fiber-Optic Communication for Remote Access utilizing the DNP 3.0 protocol.
- 4.5.12 Retaining springs to secure manuals to the cabinet shall be supplied on the inside of the enclosure. Storage of the manuals, in this manner, shall not adversely affect the control unit.
- 4.5.13 The control panel shall allow automatic operation of the voltage regulator under reverse power flow conditions. The reverse power flow detector shall operate within the following limits: Sensitivity – reverse power flow detected at two percent (2%) of the rated 55°C load current of the regulator.
- 4.5.14 Load power factor – 0.5 lag to 0.55 lead.
- 4.5.15 Input Voltage – 100 to 140 volts, 60 Hertz. Potential transformer shall be internally located for input voltage requirements.
- 4.5.16 The motor starting capacitor shall be located inside the Control panel and be easily accessible for maintenance.

5 TESTS

- 5.1 Each voltage regulator shall receive complete tests at the factory in accordance with latest ANSI C57.15 and NEMA TR.1.

5.2 In addition, every voltage regulator shall be test operated for a minimum of 250 operations, stepping through multiple steps in both the raise and lower directions to verify correct control and tap changer operation.

5.3 Copies of Certified test reports shall be available for District inspection at the District's request. Test reports shall be sent to District prior to shipping regulators.

5.4 SHORT CIRCUIT WITHSTAND

5.4.1 All voltage regulators shall be capable of withstanding, without damage, short circuit currents as specified in the latest revision of ANSI C57.15.

6 EVALUATION

6.1 Appendix A of this specification must be completely filled out for bid/quote to be evaluated. Prices will be firm for delivery date specified. Failure to include prices and/or delivery in the appropriate blank for each item will be sufficient cause for rejection of bid.

6.2 For bid evaluation, regulator losses will be considered. The evaluation price will be calculated using the following equation:

$$REP = BP + (NL \times \$4.07) + (LL \times \$1.79)$$

REP – Regulator Evaluation Price

BP – Base Bid Price

*NL** – Core Loss (Watts)

*LL** – Conductor Loss (Watts)

* For loss evaluation purposes, loss values at 16 raise in the Bidder's Data shall be used.

7 CONTROL INTERROGATION SOFTWARE

7.1 Software required to interrogate, modify, and download control panel functions, and event recorder shall be compatible with Microsoft Windows operating systems.

7.2 Included with the software shall be a site license that would allow for the software to be installed on any personal computer and server that Chelan PUD deems necessary.

8 DEVIATION FROM SPECIFICATION

- 8.1 It is expected that any regulators supplied by the vendor will be in strict accordance with this specification unless appropriately noted with the original bid. The purchaser reserves the right to evaluate any exceptions that are taken by a vendor. Any deviation from this specification without prior approval will be sufficient cause for rejection of the regulators furnished and/or rejection of that manufacturer from furnishing the equipment in the future. All deviations shall be noted on the Appendix B form "Deviations From Specifications".

9 SHIPPING INSTRUCTIONS

- 9.1 Voltage regulators shall be shipped completely assembled and oil filled with the proper amount of voltage regulator oil.
- 9.2 Voltage regulators shall be shipped on individual pallets (one voltage regulator per pallet). Voltage regulators shall be securely attached to the pallets to allow for forklift handling.
- 9.3 Voltage regulators shall be shipped on an enclosed van.
- 9.4 Voltage regulators must be shipped FOB Destination.

10 APPENDIX A – EQUIPMENT DATA SHEET

Line Item Number:		Delivery Date:
Description:

Single Phase 15kV Transformer Pole Type 25-167kVA

Originator: DSmith

Date: 12/5/06

Approval: DSmith

Date: 6/27/2007

Page 1 of 1

Revision: **NEW**Stds Committee Approval:
Approved

Application: Overhead pole-type distribution transformers shall be single phase, 60 hz. mineral-oil filled and self-cooled.

Common Name: "Overhead POT"

Material Specifications: Transformers shall meet Districts Specifications #1212.01

Size and Ratings: The transformer shall have a kVA rating of one of the following sizes: 25, 50, 75, 100, or 167 based on not exceeding a 65°C average winding temperature rise. Transformers shall have two primary bushings and rated 95BIL.

Maximum Dimensions and Weights shall not exceed the following values.

Item Number	kVA	Secondary Voltage	Weight (lbs.)	Height* (in.)	Width (in.)**	Depth (in.)***	Secondary Terminals	Category
088816	25	120/240	375	41	23	25	Clamp	Stock
088818	50	120/240	600	45	25	27	Clamp	Stock
088819	75	120/240	875	51	25	27	Clamp	Non Stock
088820	100	120/240	1000	55	32	30	Clamp	Stock
088821	167	120/240	1600	60	38	38	4-hole spade	Min stock
088824	25	277	375	41	23	25	Clamp	Stock
088826	50	277	600	45	25	27	Clamp	Stock
088828	100	277	1000	55	32	30	Clamp	Stock
088829	167	277	1600	60	38	38	4-hole spade	Min Stock

* Height shall be measured from bottom of tank to top of primary terminal at top of primary bushing.

** Width shall be measured from lifting hook to lifting hook.

*** Depth shall be measured from mounting bracket to outside of secondary terminal.

Stocking Category:

1. Stock – Sufficient stocking level for normal use is carried.
2. Non Stock – No minimum stock level is carried.
3. Min Stock – Normally, only 1–3 units are carried as critical spares. Any use will trigger a reorder.

Shipping and Identification: Transformers shall be shipped on a pallet. A tag indicating the kVA size, manufacturer, voltage rating, serial number, actual test data and customer's purchase order number shall be attached to each unit. Units shall be shipped in a closed van so they are delivered clean and free of surface contamination.

Marking: The transformer nameplate shall be so labeled to indicate that at the time of manufacture the transformer liquid contained less than one part per million PCB's. Each unit shall be stenciled (2" high minimum) with the rated kVA on the lower face of the transformer.

Single Phase 15kV Transformer Pad Type 25-100kVA

Originator: DSmith

Date: 12/5/06

Approval: J. Nieborsky

Date: 12/2/2011

Page 1 of 1

Revision: **ELSP part numbers updated**

Stds Committee Approval:

Approved

Application: Pad-mounted distribution transformers are used to supply single phase, 60 Hz., secondary 120/240 volt electric power

Common Name: "PADMOUNT"

Material Specifications: Transformers shall meet Districts Specifications #1212.01.

Typical Tank Dimensions:

Shipping and Identification: Transformers shall be shipped on a pallet, in a closed van so they are delivered clean and free of surface contamination. A tag indicating the kVA size, manufacturer, voltage rating, serial number, actual test data and customer's purchase order number shall be attached to each unit.

Marking: The transformer nameplate shall be so labeled to indicate that at the time of manufacture the transformer liquid contained less than one part per million PCB's. Each unit shall be stenciled (2" high minimum) with the rated kVA on the lower face of the transformer.

TRANSFORMERS, PADMOUNT THREE PHASE 75-2500 kVA

Originator: DSmith

Date: 10/16/2006

Approval: J. Nieborsky

Date: 12/2/2011

Page 1 of 1

Revision: **ELSP fuse part numbers updated**

Stds Committee Approval:

Approved

Application: Pad-mounted distribution transformers shall be three phase, 60 Hz., mineral-oil filled and self-cooled and meet Districts Specifications #1212.01.

Size and Ratings: Transformers shall be compartmental, pad-mounted, three phase, dead front, loop feed for use with separable high voltage connectors.

Ratings: The transformer shall have a kVA rating of 75, 150, 300, 500, 750, 1000, 1500, 2500kva based on not exceeding a 65 °C average winding temperature rise. The low voltage winding shall be 208Y/120 or 480Y/277 volts.

Typical Dimensions, Does not include cooling fins.

**SWITCH, POLE TOP, THREE PHASE
GANG-OPERATED, LOAD BREAK
15kV, 600A**

Originator: DScott

Date: 2/13/2020

Approval: J. Mitchell

Date: 10/27/2022

Page 1 of 1

Revision: **Revised descriptions**

Std's Committee Approval:

Approved

Specification Requirement Minimums: Three phase gang-operated, load break, 15 kV class, 110 kV BIL, 600 Amp minimum. Extra phase spacing for raptor friendly (can be achieved by using 27 kV class switch or GO95 spacing). Fiberglass arm. Polymer or Cypoxy insulators. Single point lifting. Pole band and J hook. Extra section of torsional control rod for tall poles. Fiberglass section of control rod. Padlockable. Arrester brackets on vertical models. Factory assembled and ready for installation. All parts UV stabilized. IEEE C37.30, C37.32, C37.34, and IEEE1247 (load break testing criteria only).

Packaging and Marking: Items shall be suitably packaged to prevent damage. Extra strong crates for multi-year outdoor storage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part (and) its packaging.

Approved Manufacturers:

Cooper/Eaton, S&C, Hubbell, Inertia

*Vendors: review manufacturer catalog numbers before accepting orders.

Approval: D Plinski

Date: 02/26/2018

Page 1 of 1

Revision: **Updated wording**Stds Committee Approval:
Approved

Application: PVC (Polyvinyl Chloride) conduit is used where primary or secondary cable is buried below streets, patios, and other large concrete or asphalt areas which would make access to the cable difficult for future repairs. Schedule 40 PVC is also used for pole risers.

Specification: The conduit shall be made of POLYVINYL CHLORIDE and utility gray in color. It shall be resistant to sunlight and UL Listed for exposed or outdoor usage. This conduit shall meet or exceed the following standards and tests. NEMA standard TC-2, UL listing UL-651, ASTM test method D1598, dimensional requirements of ASTM d 1785 and the joint specifications of ASTM d 2672-96a. (the socket length in inches shall comply with table 1 Tapered sockets for bell-end pipe column "c" pressure). Rated for 90 degree C conductor. Beveled edge on interior of male end to ensure smooth transition of joint.

Packaging & Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. At a minimum, lifts of conduit must be framed with at least 2" x 4" dimensional lumber. Duct shall be clearly marked with manufacturer's name or trademark, nominal size, material (PVC) and NEMA type.

Approved Manufacturers: Royal Pipe, Carlon, Pw Pipe, Can-Tex, Carlon, J - M Manufacturing

Application: PVC (polyvinyl chloride) power duct is for encasing power cable in direct burial applications where flexible duct is needed.

CAUTION: Care should be taken when installing conductor in flexible duct, duct walls are thin and are easily worn through.

Ordering Description: (Size) Flexible PVC plastic conduit.

Duct shall be:

- PVC, gray in color, per NEMA standard TC-12
- suitable for use with 90 deg. C cable in wet or dry locations.

Packaging & Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part and its packaging.

1

*Shown without side plates

2

*Shown with side plates

Application: Used to mount riser conduits to poles. Conduits can be mounted to either side of bracket. The side plate prevents conduits from being mounted too close to pole, thus ensuring climbing space for linemen. 4"x4"x1/8" thick curved, diamond shaped mounting plate has four 9/16" holes for pole attachment. Channel strut is 1-5/8" 12 ga. Clamps secure the conduit to the strut.

Common Name: Riser standoff bracket

Material: A-36 steel & 12 ga. Strut channel, Hot Dipped Galvanized finish.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

**CONDUIT, PVC SWEEP ELBOWS**

Originator: DSmith

Date: 7/19/2006

Approval: DSmith

Date: 12/3/2007

Page 1 of 2

Revision: added 2" 24" radius elbow.

Stds Committee Approval:

Approved

Application: PVC (Polyvinyl Chloride) conduit elbows (sweeps) are used to transition from horizontal to vertical such as riser poles, termination cabinets, etc for primary or secondary cable.

Specification: The elbows shall be made of POLYVINYL CHLORIDE and utility GRAY or Orange in color as identified in the description. This conduit shall meet or exceed the following standards and tests. NEMA standard TC-2, UL listing UL-651, ASTM test method D1598, dimensional requirements of ASTM d 1785 and the joint specifications of ASTM d 2672-96a. (The socket length in inches shall comply with table 1 Tapered sockets for bell-end pipe column "c" pressure). Rated for 90 degree C conductor.

Approved Manufacturers: Royal Pipe, Carlon, PW Pipe, Can-Tex, J - M Manufacturing

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

Conduit Duct Spacers Underground

Originator: DSmith

Date: 7/9/2007

Approval: DSmith

Date: 7/9/2007

Page 1 of 1

Revision: **NEW**Stds Committee Approval:
Approved**Figure 1****Figure 2**

Application: **Underground Conduit Duct Spacers** are designed to be used in concrete encased applications only. The system consist of either a base unit and an intermediate unit that snap together or a one piece dual conduit unit.

The use of duct spacers for direct burial may result in excessive point deflections unless proper compaction of the appropriate backfill material. Direct burial installation is not recommended by the manufacture.

Specifications:

Each unit shall be manufactured out of highly engineered thermoplastic material and shall be specifically designed to withstand the rigors of concrete construction.

Approved Manufacturers: **Carlton**

Approval: J. Mitchell

Date: 5/20/2014

Page 1 of 1

Revision: **Added fiber optic handhole**

Stds Committee Approval:
9/22/06

Application: These fiberglass boxes are used for splice and pull boxes for the District's electric and fiber cable. Boxes and covers are for locations that are non-traffic or may have an occasional, non-deliberate vehicle exposure. Cover is rated for a maximum of 5,000 lbs.

Features: These units are molded of high density polyethylene. A flange around the base prevents frost from heaving or tilting. Units can be nested for a minimum amount of warehouse storage space. All units are molded in green color.

The handhole lid shall be secured by a sliding metal latch on one end and a double locking mechanism on the other end. The double locking mechanism shall consist of a 3/8-16 penta head bolt and accommodations for a crimp type lock. In addition a horseshoe cutout is required at the penta head lock area for drainage.

Handhole shall be equipped with a recess in lid for attaching an ID number and the following words shall be molded into the lid depending on its application with a minimum of 1 ¼ inch high letters.

**Fiberglass Box Pads For
Single Phase Transformers**

Originator: D Smith

Date: 10/1/2021

Approval: D Scott

Date: 09/27/2021

Page 1 of 1

Revision: 9/22/06: Removed Highline due to lack of reinforcement

Stds Committee Approval: 9/22/06

Revision: 9/27/2021: Add reinforcement information

Application: Used to provide a foundation for Single Phase Pad Mounted Transformers from 25 KVA up to 167 KVA.

Covers are used to protect the public from open transformer pads prior to the installation of transformers. See note 7.

Minimum Specifications:

Stock No.	Used For	Top	Opening	Capacity
046550	All Single Phase Padmount Transformers	42X38X30"	24" W x 22" D	

1. Fiberglass Transformer Box Pads shall be constructed of high-strength FRP laminate to meet Western Underground Guidelines. The laminate shall be applied to a high grade marine grade gel-coated female mold.
2. Exterior color: Munsell #7GY3.29/1.5 Green. Marine grade gel coat.
3. One and a half-ounce random fiber chopped fiberglass and resin will be the initial coating, followed by alternate layers of 24-ounce woven roving and chopped fiberglass.
4. The product shall meet a Class 2 flame retardant rating. Aluminum Tri-Hydrate is permitted as a filler only to a maximum loading of 43%. Glass content of the finished laminate shall not be less than 33%.
5. Each unit shall be supplied with four 4.5 Inch X 1.5 inch hold down cleats with stainless steel inserts and brass bolts installed loosely on each unit.
6. The perimeter base lip shall be a minimum of 4-1/2" for stability.
7. Cover shall be supplied with penta-head bolts for fastening to box pad.
8. Type testing must include a load test; 9,000 pounds of concrete blocks.

Packaging, Marking & Shipping: Items shall be suitably packaged to prevent damage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging. Units shall be shipped stacked on wooden pallets, no more than six feet high. Units shall be separated by wood blocks to ensure they do not wedge together.

Originator: DSmith

Date: 7/7/06

Approval: DSmith

Date: 7/9/2007

Page 1 of 1

Revision: **NEW****Std's Committee Approval:**
Approved

Application: Hill Holders are placed behind a pad-mount equipment situated on a hill. Hill Holders help hold back gravity induced soil movement. In addition they prevent corrosion and other damage by blocking dirt and rocks from falling on or against the back and sides of the equipment.

Specification: Each unit shall be produced in a female mold of fire retardant double layers of 24 oz woven roving reinforcement cloth with a C-type fiberglass and resin mix. The exterior finish shall be covered with a smooth Munsell Green gel-coat, which contains UV stabilizer for superior weatherability.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

1. SCOPE

The technical provisions of this specification detail the minimum performance criteria and physical requirements for the concrete junction boxes, switch boxes, transformer vaults and covers to be used in the construction of underground electrical systems.

1.1. Third Party Purchases

The technical provisions of this specification apply to those units purchased directly by Chelan PUD and those units sold to third parties for use by Chelan PUD.

2. APPROVAL

All construction drawings used in the manufacturing of the concrete junction boxes, switch boxes, transformer vaults and covers will be reviewed by Chelan PUD before construction/manufacturing begins.

3. STRUCTURAL

Underground distribution concrete junction boxes, switch boxes, transformer vaults and covers of this specification shall meet the following minimum requirements.

3.1. CONCRETE

The concrete used shall have a minimum 28 day compressive strength (f'c) = 6000 PSI.

3.2. REINFORCEMENT

All units shall be reinforced with a minimum grade 60 welded wire fabric and #3 - #8 grade 60 bars.

3.3. DESIGN LOADING

All units shall be constructed for H-20 wheel loads or better with a 30% impact factor.

3.4. UNISTRUTS

Unistruts shall be provided and centered per enclosed applicable Chelan PUD T&D Vault and Cover Standards. The Unistrut size shall be 1 5/8" x 13/16" x 36" minimum length. All Unistrut material shall be hot-dipped galvanized.

4. INTERNALLY GROUNDED VAULTS

Chelan PUD is using internally grounded vaults for junctions, transformer and switch installations. The general requirement will be to bond all internal metallic structures

**T&D UG VAULTS & COVERS

together to a bronze insert. This grounding procedure shall meet the provisions of NESC Rule 94B5

4.1. ELECTRODES

Grounding electrodes shall be as shown on attached drawings and:

SPECIFICATION	REBAR
Minimum length	22 feet
Minimum size	# 3 - 3/8"

4.1.1. Installation

- The Electrodes shall be installed as straight as possible.
- The Electrodes shall be encased with a minimum of 1½" of radial concrete.
- The Electrodes shall be a minimum of 2.5' below the top of the vault or junction box.

4.1.2. Ground Insert Connector

Each bronze insert will be tapped for 1/2"-13 bolt, and located 2 inches below the Unistrut and in the middle of two opposite side walls (two inserts per wall, one faces inside the vault the other faces outside the vault) as shown in the attached Standard Drawings. A 3/8-inch steel rod, or similar sized metallic conductor, shall be used to bond the inserts to the structural steel in the concrete. The inserts shall be plugged to prevent contamination from entering.

On multi-sectioned vaults, the inserts shall be vertically aligned. Only the middle section will have the inserts that face inside the vault and outside the vault, all other inserts in these vaults will be placed as shown in the attached standard for that type vault.

4.1.2.1- Bonding to rebar and Wire Mesh

Ground insert connectors shall be electrically bonded to rebar and wire mesh by welded connections in a minimum of two locations

**T&D UG VAULTS & COVERS**
PRECAST CONCRETE
- Self Grounding -

Date: 9/17/2021

Approval: J Mitchell

Date: 9/17/2021

Page 4 of 7

Revision: **Updated NESC Rule #**Std's Committee Approval:
APPROVED**4.1.2.2 – Labeling of Inserts**Inserts shall be labeled / identified in **Green Paint** as follows:

Section	Label
Base (Section that includes the minimum of 22 ft. of #3 Rebar bonded to insert)	GRND
Cover	BOND
Mid-Section	BOND

The labeling shall be adjacent to the insert. When inserts on covers are oriented downward the label shall be painted on the access opening side closest to the insert location.

5. COVERS**5.1. GROUNDING INSERTS**

All covers shall have grounding inserts installed per manufacturer's and Chelan PUD's specification. Each insert shall be bonded to the wire mesh used as reinforcement in the cover. The location is shown on the drawings, for each unit, included with this specification.

5.2. METALLIC COVERS

The 36" x 36" cover(s) shall be designed for AASHTO H20 loading, as specified, and shall have two 180-degree flush hinges, lifting handle(s), and concealed locking device(s). A Penta head bolt in a recessed, non-rotating cup is to be part of the required locking device. (See Figure 1, ANSI C57.12.28.1988, for typical installation). The lid shall be manufactured from a skid resistant surface, hot-dipped galvanized steel and be provided with spring-assisted opening and closing requiring a 55-pound maximum effort to open and close it. As an alternate, an aluminum lid may be supplied subject to Chelan PUD's approval. If supplied, it must meet all the applicable requirements above.

5.3. COVER, TRANSFORMER VAULT

The transformer vault lids shall have blockouts as described in the attached material standard for each type vault.

5.3.1. LOGO "CHELAN PUD"

All covers shall have the logo "**CHELAN PUD**" cast into the concrete structure using minimum two-inch-high letters. The logo is to be legible after 20 years

exposure and placement such as to be easily noticed by a lay person casually inspecting the structure.

6. LIFTING METHOD

Lifting provisions shall be installed per manufacturer's and Chelan PUD's requirements.

6.1. COVERS

6.1.1. Burke Fittings

All vault covers supplied shall have a Burke fitting placed in each corner of the top according to manufacturer's standards.

6.1.2. Strap Lifting Notch 554 And 575 Vaults Only

All 554 and 575 covers supplied shall have a "Strap Lifting Notch" cast in the vault side of the cover in each corner. The triangular notch shall have three (3) inch sides and be ¼ inch high.

6.1.3. LOWER UNIT

6.1.3.1. 554 And 575 Units

These units shall have two (2) ton Rigging/Lifting fittings placed in each corner per manufacturer's specifications and approved by Chelan PUD.

6.1.3.2. 612 And 810 Units

These units shall have four (4) ton Rigging/Lifting fittings placed in each corner per manufacturer's specifications and approved by Chelan County PUD.

7. ACCESSORIES

Items to be included with each type vault.

7.1. SUMP

A sump shall be provided in the bottom of each vault. The size and placement of the sump shall be as shown in the manufacturer's catalog and approved by Chelan PUD. The bottom of the sump shall be designed such that it can be knocked out if desired.

Single & Three Phase
with Mounting Hardware.**

Originator: DSmith

Date: 08/31/2006

Approval: D. Scott

Date: 11/15/2022

Page 1 of 1

Revision: Changed Approved Manufacturers and Photos

Std's Committee Approval: **Approved**

Specification: Terminating cabinets shall meet the requirements of Western Underground Committee Guide 2.13 and shall be constructed of all-welded construction 12 gauge steel. The lid shall be hinged at the top and secured with a stainless steel Penta-head bolt and have provisions for a padlock. A "Wind Stop" shall be included to prevent the top-hinge from closing inadvertently. The enclosure shall be painted with Munsell Green (7GY 329/1.5). All hardware and hinges shall be 304 stainless steel.

Each unit shall include one or more 4-position 15kv 200 amp load break cable junction modules (Elastimold, Hubbell or Cooper) Two parking stands shall be located inline with each junction module, (one on each side of the cable junctions).

Three grounding lug provisions shall be mounted on the inside back cabinet wall in a horizontal alignment. All cable junction mounting plates and parking stands shall have one ground lug provision each and be painted white or light gray. All grounding provisions shall come equipped with Fargo BVC-207-FT grounding lugs.

In addition, **four (4) sets of 1-1/4" X 3/8" stainless steel mounting bolts, lock washers, and nuts** shall be provided in a bag attached to each unit to facilitate attachment to a fiberglass ground sleeve.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part and/or its packaging.

Approval: J Mitchell

Date: 11/01/2016

Page 1 of 1

Revision: **Revised shipping requirements**

Stds Committee Approval: **Approved**

Application: Used to supply a base for single phase & three phase 15kV 200Amp terminating cabinets.

Specification: Each unit shall be produced in a female mold of fire retardant layers of 16 oz woven roving reinforcement cloth with a C-type or E-Type fiberglass and resin mix. The exterior finish shall be covered with a smooth Munsell Green gel-coat, which contains UV stabilizer for superior weatherability. The units shall be non-conductive and have external deflection ribs for increased deflection resistance. Deflection ribs shall be placed at a minimum: (1) every 24".

Exact Dimensions:

Revision: Change # connections from 20 to 22 for small cabinet. Added Minimum Dimensions. Revised approved manufacturers section.

STD Committee: **Approved**

4. Minimum Dimensions:

Description	Material Gauge	No. of Conductors per phase	Dimensions D X W X H (inches)	Minimum Bus Rating	Approximate Weight (lbs)
Small Cabinet	12	24	30" x 36" x 44"	4000	95
Large Cabinet	12	30	54" X 48" X 44"	4000	225

5. Specification:

5.1. Cabinet:

The cabinet shall be manufactured from galvanized steel, stainless steel or 5052-H32 aluminum. Cabinet thickness shall be 12 gauge minimum for steel and 0.125 inch minimum for aluminum. The cabinet and supporting frame shall be sufficiently strong to prevent noticeable deflection or distortion to the cabinet during installation and use. The cabinet roof shall be crowned so as to shed water. The cabinet shall include lifting provisions.

5.2. Doors

Each termination enclosure shall be equipped with side-hinged doors designed to swing open horizontally. The doors shall be located on opposite sides of the cabinet and parallel to the bus bars. Doors shall be of sufficient size to allow full access to the bus bars and cabinet interior and be equipped for latching in the open position.

5.3. Finish

The enclosure finish shall meet or exceed the requirements of ANSI C57.12.28, latest revision. The topcoat color of paint shall be dark green Munsell No. 7GY 3.29/1.5. Combined primer and topcoat thickness shall be no less than 3.0 mils. Primer and paint shall be lead free.

5.4. Set Screw Bus Bars

Each enclosure shall be equipped with four set screw bus bars (one per phase). These bars shall be manufactured from 6061-T6 aluminum or a District approved equivalent and shall be fully tested per ANSI C119.4 for Class A connectors. Bus bars shall have a minimum 4,000 amp load rating.

Set screw bus bars shall utilize two 3/8 inch allen head set screws per cable position and shall accommodate cable sizes from #2 through 750 kcm. Holes shall actually be drilled to fit 800 kcm cables. Set screw bus bars shall be compatible with aluminum or copper conductors.

Set screw bus bars shall be installed in the cabinet on a nonconductive mounting bracket. All mounting hardware shall be stainless steel. Bus bar locations shall be staggered as shown in Figure 1. The bus bars, mounting bracket and hardware must be of sufficient strength to support full secondary cable weight without the need for supplemental cable supports.

Each bus bar shall be equipped with an insulated 105°C rated plastic cover of District approved design.

6. Packaging and Marking: Pad-mounted secondary termination enclosures shall be shipped in an enclosed van and secured to individual nonreturnable wooden pallets suitable for handling with a forklift.

FUSES & ARRESTERS

SURGE ARRESTERS, METAL OXIDE DISTRIBUTION CLASS

Originator: DSmith

Date: 7/25/2006

Approval: DScott

Date: 8/26/2019

Page 1 of 1

Revision: Catalog Numbers

Stds Committee Approval:

Approved

Application: This standard applies to metal-oxide surge arresters designed to limit the voltage surges on 60 Hz power circuits by passing surge discharge current to ground and automatically limiting the flow of system power current.

Applicable Standards: IEEE Standard for Metal-Oxide Surge Arresters for Alternating Current Power Circuits, C62.11

Specification: Metal Oxide Varistor with Polymer S. With ground lead isolator, insulating base bracket, protective terminal cap, Silicon Bronze Nut, Stainless Steel Wire Clamp with Wildlife Protector and without crossarm mounting bracket.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

Commonly Applied Arrester Voltage Ratings:

System Voltage		Recommended Arrester Rating per IEEE C62.22 (kV rms)			
Nominal	Maximum	MCOV	4-Wire WYE Multi Grounded Neutral	3-Wire WYE Solidly Grounded Neutral	Delta and Ungrounded WYE
12.47Y/7.2	13.2Y/7.62	7.65	9	12	-

**Open-Type Cutouts 15kV,
100/200 Amp 10,000 Amp Interrupting
Polymer Insulator**

Originator: D. Scott

Date: 01/18/17

Approval: D Scott

Date: 03/08/2017

Page 1 of 1

Revision: Added Alumaform & stock numbers

Stds Committee Approval:
Approved

Application: This device is used to provide overcurrent protection and visible indication of fuse operation for the overhead 15kV distribution system. The cutout can also provide a visible break sectionalizing point for maintenance personnel, and can function as a loadbreak switch when used in conjunction with a portable loadbreak tool.

Insulator: Insulator shall be made of composite-polymer silicone.

Loadbuster Hooks: All cutouts shall have loadbuster hooks for use with S&C loadbuster tool.

Brackets: Cutouts shall have standard NEMA Class B bracket, galvanized steel and shall include 5" carriage bolts with locking nuts.

Ratings:

- Class I: 100 amps, 15kV max., 110kV BIL, Interrupting rating: 10,000 amps AIC. @60Hz
- Class II: 200 amps, 15kV max., 110kV BIL, Interrupting rating: 12,000 amps AIC. @60Hz

Fuseholder: The fuseholder tube shall be an S&C TYPE XS fiberglass or fully compatible equivalent.

Connectors: Conductor connectors shall be standard parallel-groove type for wire size#6 Sol. to 2/0 Str. Cu. or Al.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part and its packaging.

Approval: DSmith

Date: 7/9/2007

Page 1 of 1

Revision: **NEW**

Stds Committee Approval:

Approved**SM-4Z****SML-4Z**

Application: These fuses are utilized in indoor and outdoor metal enclosures on 15kv systems. They consist of a fuse unit and fuse holder. The bases and insulators are not part of this assembly.

Specification:

1. The SM-4Z fuse is a non load break fuse assembly rated up to 200 Amps.
2. The SML-4Z fuse assembly contains a Uni-Rupter and is designed for single-pole live-switching duties in single-phase or three-phase circuits of distribution systems rated 14.4 kV. The unit shall be designed for a one-time fault closing equal to the interrupting rating of 20,000 amperes RMS asymmetrical at 14.4 kV and a two-time capability of 13,000 amperes RMS asymmetrical at 14.4 kV. The maximum fuse size is 200 Amps.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

Shipping: No Special Shipping Instructions

**FUSE HOLDER, BAY-O-NET**

Originator: DSmith

Date: 7/25/2006

Approval: DSmith

Date: 6/29/2007

Page 1 of 1

Revision: **NEW**

Std's Committee Approval:

Approved

Application: Bayonet Fuses are used to protect transformers and distribution systems. They are designed for use in pad-mounted or subsurface distribution transformers filled with transformer oil. The assemblies can be removed with a hotstick.

Removal of the fuse holder from the assembly indicates that the apparatus is electrically disconnected. It also allows convenient fuse element inspection and replacement. When typical safety practices are followed, the assemblies can be loadbreak operated for working on the transformer secondary; changing distribution voltage with dual voltage switches or tap changers; or disconnecting the apparatus from the line.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

Approved

Application: This standard applies to links for high voltage fuses (above 600V) for enclosed and open link types for distribution cutouts.

Specifications: Distribution fuse links shall be the removable or solid buttonhead type meeting the following requirements.

Dimensions: All fuses shall be at least 23 inches long.

Strength: Fuses shall meet ANSI standard C37.42, latest revision. Fuses 10 through 100 amp size shall have non-damageable silver fusible elements.

Packaging and Marking: Items shall be suitably packaged to prevent damage.

The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part and its packaging. The part shall show rated continuous current followed by a type identification, STD, T, 200, or K.

FUSE, CURRENT LIMITING DROPOUT (ELF FUSE)

Originator: DSmith

Date: 7/17/2006

Approval: DSmith

Date: 6/29/2007

Page 1 of 1

Revision: **NEW**

Stds Committee Approval:

Approved

Application: This Current-Limiting Dropout Fuse is a full range current-limiting fuse designed for mounting in an industry standard interchangeable cutout that is presently used for expulsion fuses. The ELF fuse is designed to be used to protect poletype transformers, single-phase and three-phase laterals and underground taps.

The ELF dropout fuse operates silently, unlike expulsion fuses. In addition, the expulsive shower that exists with an expulsion fuse operation is eliminated. It is designed to be mounted in open distribution cutouts including S&C Type XS, A.B. Chance Type C, Joslyn Type L and ABB Type ICX cutouts. Refer to Cooper Product Literature 240-66

Common Name: ELF Fuses

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part and/or its packaging.

Approved Manufacturers:

**FAULT FITER, ETP FUSE**

Originator: DSmith

Date: 7/17/2006

Approval: DSmith

Date: 6/29/2007

Page 1 of 1

Revision: **NEW**

Stds Committee Approval:

Approved

Application: Backup current-limiting fuses designed to protect transformers are used in series with another protective device (such as an expulsion fuse). This combination limits the high-fault current to a safe level, thus providing protection through the complete range. As its name implies, the "ETP" is for External Transformer Protection.

For conventional transformers protected by expulsion-fuse cutouts, the ETP can be installed in series with the cutout. For self-protected transformers, the ETP can be applied on the high-voltage bushing in series with the internal transformer expulsion fuse. From 8.3kV to 23kV and from 8T to 80K

Date: 2/26/2018

Page 1 of 1

Revision: **Added new item; removed obsolete items**Std's Committee Approval:
APPROVED

Application: These devices are electric field reset fault indicators (type ERL) derive their operating power from the potential gradient around high-voltage power lines. The ERL's inrush restraint option blocks targeting for recloser operations. When the upstream protection operates, the indicator senses the collapse of the voltage field and prohibits tripping until the utility is able to restore normal system conditions.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

Stds Committee Approval:

Approved

Application: These units are used on 200 and 600 A class underground distribution systems whose terminators have test points. The unit requires a 5 kV phase-to-ground minimum voltage to reset and remain ready to trip. Its target, built into the sensor housing itself, automatically resets when system voltage returns to normal. The conductive, EPDM rubber housing maintains the separable connector system's ground shielding. The unit operates independently of load current.

The unit's inrush restraint feature blocks tripping that might result from reclosing operations. When the breaker or recloser opens, the unit senses a loss of voltage on the test point. The unit blocks the display from targeting if the subsequent inrush current exceeds the trip value. It is ready to trip a few minutes after reenergization.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

SWITCHGEAR

**SWITCH, DISCONNECT SPST
Crossarm Mounted
15kV, 600 Amp**

Originator: DSmith

Date: 7/9/2013

Approval: J. Nleborgsky

Date: 7/9/2013

Page 1 of 1

Revision: **Added Cooper Catalog Number**

Std's Committee Approval:

Approved

Application: Loadbuster Disconnects are designed for use with Loadbuster, S&C's portable loadbreak tool, which has an interrupting rating of 600 amperes nominal, 900 amperes maximum.

When used with Loadbuster, the disconnects are suitable for these single-phase live-switching duties on single-phase or three-phase circuits of overhead distribution systems:
They can be mounted either vertically or horizontally.

Specification: Each switch shall have the following ratings:

Equipped: With Loadbuster hooks for operation with an S & C Loadbuster tool.

Electrical Rating: Switch shall be capable of conducting 600 amps continuous, 30,000 amps momentary in the bypass position.

Insulators: Shall be NEMA standard posts **non porcelain** suitable for outdoor operation.

Terminal Pads: Shall be NEMA standard with two 9/16 inch diameter holes on 1-3/4 inch centers.

Base: Shall Be Structural Steel Channel Approximately 5 Inches Wide Carriage Bolt Slots And A Backing Plate Suitable For Mounting Either Vertically Or Horizontally. Base Shall Be Hot-Dipped Galvanized After Fabrication Per Latest Revision Of Astm A-153.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or its packaging.

Accepted Manufacturers: S&C, Cooper Power Systems

Stds Committee Approval:

For Review

Specification Requirement Minimums: Three phase gang operated. Load break. 15 kV class, 110 kV BIL. 600 Amp minimum. Extra phase spacing raptor friendly. Fiberglass arm. Polymer or Cyproxy insulators. Single point lifting. Pole band and J hook. Extra section of torsional control rod for tall poles. Fiberglass section of control rod. Pad lockable. Arrester brackets on vertical models. Factory assembled ready for installation. All parts UV stabilized. IEEE C37.30, C37.32, C37.34, and IEEE1247 (load break testing criteria only).

Packaging and Marking: Items shall be suitably packaged to prevent damage. Extra strong crates for multi-year outdoor storage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

Approved Manufacturers:

Cooper/Eaton, Siemens/Bridges, S&C, Hubbell, Inertia

*Vendors: review manufacturer catalog numbers before accepting orders.

SWITCH, REGULATOR BYPASS Sequenced

Originator: DSmith

Date: 6/29/2007

Approval: DSmith

Date: 10/17/2018

Page 1 of 1

Revision: **NEW**

Stds Committee Approval:

Approved

Application: A single-phase regulator bypass switch (bypass-disconnect) is used to bypass a regulator before isolating it from the circuit. The operation requires a single stroke and will not interrupt customer service. The closing stroke puts the regulator back into service before the bypass is removed.

Specification: The Voltage regulator bypass switch shall be equipped with a device for interrupting regulator exciting current with no exposed arcing and meeting the following additional requirements. Sequence coordination required.

Electrical Rating: Switch shall be capable of conducting 600 amps continuous, 30,000 amps momentary in the bypass position.

Insulators: Shall be NEMA standard non-porcelain posts suitable for outdoor operation.

Terminal Pads: Shall be NEMA standard with two 9/16 inch diameter holes on 1-3/4 inch centers.

Base: Shall be structural steel channel approximately 9 inches wide with 9/16 inch diameter holes for mounting bolts. Base shall be hot-dipped galvanized after fabrication per latest revision of ASTM A-153.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or its packaging.

Accepted Manufacturers: Cooper Power Systems, S&C

Specification: Refer to Equipment Specification #1513.01 which covers the requirements for furnishing and delivering free-standing, self-contained, cabinet enclosed 15kV rated air-insulated live-front pad-mounted switchgear with 600 amp interrupter switches and/or 200 amp fuses with integral load interrupters. This switchgear is intended for use in 60 hertz, three-phase, 12470 volt grounded-WYE underground distribution systems. This switchgear shall be designed for outdoor installation and operation and for mounting on a concrete pad or fiberglass ground sleeve.

Approved Manufactures; S&C or Federal Pacific

Application: A Spool Tie Assembly consists of one metal tie component plus tie tube. Spool ties are designed to be looped around a spool insulator mounted to a distribution pole and then twisted around the service wire neutral (messenger) to provide longitudinal support. Each spool tie is supplied with an electrometric tie tube designed to minimize abrasion to the insulator.

Specification: Each tie shall be suitable for use with ACSR, AAC, & AAAC conductor and suitable for use on ANSI 53-1,2, & 3 insulators with a 1-3/4" diameter neck. The strength of the tie shall be equal to or exceed the conductor strength.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number, applicable conductor size and color code shall be on each part.

**DEADEND, SERVICE GRIP**

Originator: DSmith

Date: 7/26/2006

Approval: DSmith

Date: 6/23/2010

Page 1 of 1

Revision: **NEW**

Stds Committee Approval:
Approved

Application: Service-Grip dead-ends are manufactured of aluminum-covered steel are designed for bare neutral messengers of self-supporting cable used in making service drops. The dead-end is recommended for service drops by reason of minimum length, economy, and neatness of appearance. Mechanical strength meets the requirements for NESC Grade "N", Rule 263-E, Supply Services, Spans not exceeding 150 feet. For service drops exceeding 150 feet, Grade "C" Construction, the Distribution Grip dead-end is recommended.

Specification: Each grip shall be suitable for use with ACSR, AAC, & AAAC conductor and suitable for use on ANSI 53-1,2, & 3 insulators with a 1-3/4" diameter neck. The strength of the tie shall be equal to or exceed the conductor strength.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number, applicable conductor size and color code shall be on each part.

**Conductor Repair Splice – Overhead**

Originator: DSmith

Date: 7/7/06

Approval: DSmith

Date: 8/31/2007

Page 1 of 1

Revision: **NEW**

Stds Committee Approval:

Approved

Application: Conductor Splices are designed as a single-component outer-layer assembly generally for Sub-EHV applications composed of three subsets.

On all-aluminum, aluminum alloy, and copper conductors of homogenous stranding, the Conductor Splice will hold a minimum of 90% of the rated breaking strength of, and provide better conductance than, an equal length of un-spliced conductor. On ACSR conductor, the *Conductor Splice* will hold a minimum tension amounting to the full strength of the aluminum strands plus 10% of the steel core strength. Conductance will be better than in an equivalent length of un-spliced conductor.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

ARMOR RODS RESTORATIVE-REPAIR.

Armor Rods may be used to restore full conductance and strength to ACSR and AAC conductors where damage does not exceed 50 percent of the outer strand layer.

Consult Factory for repair capability of specific strandings.

STRENGTH RESTORATION OF ACSR & AAC ALLOY CONDUCTOR.

The Table Below Illustrates The Total Number of Broken or Damaged Strands on The Outer Layer That Can be Repaired Using Armor Rod. For Example Armor Rod Will Repair (8) Outer Strands on 26/7 ACSR.

MATERIAL		ACSR											AAC			
STRAND RATIO		5/1	6/1	7/1	8/1	18/1	12/7	24/7	26/7	30/7	45/7	54/7	7W	19W	37W	61W
Product	Armor Rod	2	3	3	4	6	6	7	8	9	10	12	2	5	9	12
	Line Guard	1	1	1	1	4	3	3	4	5	5	6	1	3	4	6

Application: Used to prevent wear on conductor and for repairs.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The Container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

Approved Manufacturers:

PINS, INSULATOR

Originator: DSmith

Date: 5/31/2023

Approval: JMitchell

Date: 5/24/2023

Page 1 of 1

Revision: **Revised descriptions**

Stds Committee Approval:
Approved

Insulator Crossarm Pin Style: Crossarms Pins are forged in one piece from alloy steel, hot dip galvanized, and supplied with 1" nylon thread for insulator mounting. They include a square washer, square nut and curved lock nut.

Pole Top Pins: Pressed steel pole top pins with nylon alloy insulator threads are mounted against the pole by 5/8-inch bolts. The lower hole is slotted 11/16 x 1-1/4-inch on both two and three hole styles. Hot dip galvanized. The lower end of these pins is flattened and flared to give a solid bearing surface when mounted with the flange against the pole.

Transformer Lead Pins: This pin is used for carrying the leads to the transformer. It has nylon alloy threads for insulators with ANSI standard 1-inch threaded pin holes. The Hot Dip Galvanized Body is a forging with a 1/2" diameter shank.

Fiberglass Single Phase Vertical Standoff Brackets: Fiberglass Standoff Brackets are manufactured from Fiberglass Reinforced Plastic (FRP) with ductile iron or aluminum alloy fittings. The plastic material is a Polyester or Vynylester matrix containing ultraviolet protective inhibitors. The insulator threads are 1" threads in accordance with ANSI C29.5 and are coated with a semi-conductive heat shrink material. All exposed fiberglass rod shall be coated with 2-3 mils of acrylic urethane enamel paint which is baked to hardness.

Std's Committee Approval:
APPROVED**Application**

The anchor shackle is generally used as part of the insulator attachment hardware on electric transmission lines. Anchor Shackles are used for attaching suspension insulators to towers, yokes, and double arming plates. Openings are enlarged to permit the use of two or more fittings.

Specifications:

Material: Shackle, bolt and nut shall be heat treated steel per latest revisions of ASTM A36, A354 and A563 or better. Cotter pin shall be stainless steel.

Weight of Coating: All hardware shall be hot dip galvanized per latest revision of ASTM A153 Class A.

Packaging & Marking

Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part and its packaging.

Twisted-Grip**

Originator: DSmith

Date: 7/10/2006

Approval: DSmith

Date: 7/9/2007

Page 1 of 1

Revision: **NEW**Stds Committee Approval:
Approved

Application: The slack span dead end is intended for use where guying restrictions prevent full tension spans. This type of dead end is RFI free and is more economical than the DE clamp/insulator combination. Do not use automatic deadends on slack spans. For use on ACSR, AAAC, and AAC.

Specification: Helical Leg Section: Coated steel, right-hand lay. Covered Loop Section: Elastomeric compound shall resist ozone attack, weathering and abrasion.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

**POLE ANCHOR, TRI-ANCHOR**

Originator: DSmith

Date: 7/7/06

Approval: DSmith

Date: 6/8/2009

Page 1 of 2

Revision: **Added Installation Instructions**

Stds Committee Approval:

Approved

Application: This device is used to support a utility pole when no hole can be dug to a sufficient depth due to rock. The unit must be mounted into solid rock.

Specification: INCLINED UNIVERSAL NO.9 TRI-ANCHOR® modules are shipped assembled, each consisting of a forged anchor bolt, expansion shell, welded pipe and band assembly, washer and nut; along with the required field assembly hardware (2 studs c/w 2 nuts each, and 4 lag bolts) included in a separate canvas bag. Each pole installation requires 3, 4, or 5 anchor modules, depending on the pole butt diameter

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

**Approved Manufacturers:**

PUD IDENTIFICATION				MANUFACTURER CATALOG NUMBER
Stock Description	Stock No.			TRI-ANCHOR
ANCHOR, POLE, TRI-ANCHOR, (1) LEG + ACCESSORIES	027350			P-9UT

See STD Practice 062.ROCKANCHOR for engineering/installation information and requirements (# of legs required, grd line moment, etc.).

INSTALLATION INSTRUCTIONS

1. **REMOVE OVERBURDEN:** The pole butt must rest directly on the rock, so all loose overburden of soil, gravel, etc. must be removed.
2. **EVALUATE ROCK:** If the rock is fractured or unsound, an alternative method to the INCLINED UNIVERSAL NO.9 TRI-ANCHOR® should be used. e.g. if the rock can be easily broken, shoveled or augered, this would suggest insufficient rock soundness.
3. **CHECK SLOPE:** The maximum allowable slope in the rock under the pole for an INCLINED UNIVERSAL NO.9 TRI-ANCHOR® installation is 3 inches, over the diameter of the pole butt. i.e. there must not be a gap of more than 3 inches between the pole butt and the rock, and the pole must rest on the rock at some point.

**POLE ANCHOR, TRI-ANCHOR**

Originator: DSmith

Date: 7/7/06

Approval: DSmith

Date: 6/8/2009

Page 2 of 2

Revision: **Added Installation Instructions**

Stds Committee Approval:

Approved

4. **DECIDE ON NUMBER OF MODULES:** Consult the Selection Chart to decide on the required number of modules for the installation, which varies with the pole butt diameter. Where the ranges overlap, the required ground line moments will help determine the number of modules to be used.
5. **ASSEMBLE ROCK DRILLING TEMPLATE:** Choose the appropriate template core for the configuration chosen (i.e. 3, 4 or 5 modules). Insert the sleeves into the template core.
6. **ADJUST TEMPLATE:** Fit the assembled template to the pole butt, adjusting it for the pole size. Place the template right side up on the rock so that the holes to be drilled point OUTWARD from the pole center. The proper slope is given by the inclined drilling sleeve. On sloped rock, use the leveling bolts to ensure that the template is level before drilling.
7. **DRILL HOLES:** Begin at the highest point of the rock and drill a 2" diameter hole through the template to a depth of 24 inches. Continue drilling the remaining holes through the template to the same depth, when measured from a horizontal line. All rock dust should be cleaned out.
8. **INSERT THE ANCHORS:** With all holes drilled, remove the template and drop the anchors into the holes. Loosely connect the bands with the studs.
9. **ERECT POLE AND TIGHTEN BANDS:** Lift and hold the pole in place vertically. Tighten all the studs to grip the pole within the bands. Ensure that all nuts are firmly tightened.
10. **TIGHTEN ANCHOR BOLTS:** Tighten the nuts of the anchor bolts firmly. In sound rock a positive anchor will develop from the expansion of the expansion shell. In poor rock you will run out of thread before developing an adequate bond, and an alternate location or method must be used.
11. **INSTALL LAG BOLTS:** Install all lag bolts with a wrench. Pre-drilling holes in the pole and using an impact wrench or socket wrench are recommended. Release the pole.
12. **FINAL STEPS:** Grouting of the holes is optional if ice is a concern. Backfill any removed overburden if desired.
13. **MAINTENANCE:** Incorporate the INCLINED UNIVERSAL NO.9 TRI-ANCHOR® system into the regular pole and line maintenance schedule and procedures. At each inspection ensure that all nuts and lags are in place and tight.

**GUYING ANCHOR, CROSS PLATE**

Originator: DSmith

Date: 7/28/2006

Approval: DSmith

Date: 7/3/2007

Page 1 of 1

Revision: **NEW**

Std's Committee Approval:

Approved

Application: The Cross-Plate anchor is made for installation in holes drilled by power diggers. Because the size of the hole does not affect holding capacity, the hole can be dug by the same auger that is used to dig the pole holes on transmission projects. Cross-Plate anchors are installed in a diagonal bored hole which is undercut so the anchor is at right angles to the guy.

A rod trench is either cut with a trenching tool or drilled with a small power auger. Both anchor and rod trench should be refilled and tamped.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

**GUY GRIP, DEAD END**

Originator: DSmith

Date: 7/28/2006

Approval: DSmith

Date: 7/9/2007

Page 1 of 1

Revision: **NEW**

Std's Committee Approval:

Approved

Application: GUY-GRIP dead-ends are intended for use on single wood poles and Aluminum Clad Steel Strand down guy wire associated with distribution construction. GUY-GRIP dead-ends were not designed or tested for use on overhead shield wires and not intended for that application.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

Approved Manufacturers:

Revision 1: Updated PLP catalog number

Std's Committee Approval:
Approved

Application: Guy Guards are designed to identify Down Guys or other wire and cable installations where anchoring devices are exposed to pedestrian and/or vehicular traffic.

Specification: Each 8' long unit shall be made of 1-1/2" OD bright yellow round PVC that is UV resistant and flame retardant with a slotted top end. Each unit shall have an integral helix grip (pigtail) and locking strap that prevents the unit from sliding after initial installation.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

VIBRATION DAMPERS

Originator: Jeff Flader

Date: 7/10/2012

Approval: Jeff Flader

Date: 9/25/2013

Page 1 of 1

USED WITHOUT ARMOR RODS

Application: Vibration dampers work to cancel damaging fatigue caused by wind-induced vibration. Most tuned damping devices operate best near their natural frequencies. Vibration dampers are designed for efficient transfer and dissipation of energy over a wide spectrum of frequencies.

Common Name: Vibration Dampers

Ordering Description: Use tables below to order by conductor size and type. Actual damper weight may vary. Exact bolt size is not critical for the correct fit, but all connector bolts should be breakaway and removable. Dampers are sized for specific conductor sizes so weights may vary.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

POLE GAINS AND SHIMS

Originator: DSmith

Date: 7/28/2006

Approval: DSmith

Date: 7/5/2007

Page 1 of 1

Revision: **NEW**

Stds Committee Approval:

Approved

Pole Gains

Application: Pole gains enhance the stability of the crossarm and pole interface. They are used where it is possible or desirable to cut a gain in the pole.

Pole Shims are used in double arm assemblies, when the variations between pole diameters occur on H-Frame structures. Shims are used as an alternative to gaining the larger pole in and used predominantly in maintenance applications.

Specification: The item shall be made of hot dipped galvanized steel per ASTM A153.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

Insulators, Transmission, Polymer Suspension & Dead End

Originator: DSmith

Date: 5/14/2012

Approval: J Flader

Date: 5/11/2013

Page 1 of 2

Revision: Added Spec #9. Updated Manufacturer catalog numbers.

Std's Committee :Approved

Specification: Composite suspension insulator shall comply with the latest revision of IEEE P1024 and meet the following requirements:

1. Weather Sheds: Non-tracking elastomer such as EPDM Rubber OR EP Silicone.
2. Core: Fiberglass Rod
3. End Fittings: Aluminum alloy 356-T6 or galvanized malleable iron ASTM A47M
4. Construction: The weather sheds shall be one piece molded type, fully bonded to the core. The end fitting/weather shed interface shall be sealed from moisture entry and free of voids. End fittings shall be attached to the core by swaging (compression). Color: Shall be Sky Gray.
5. Tests: Insulators shall be tested per latest revision of ANSI C29.1 Test Methods for Electric Power Insulators. Every insulator in production runs shall be given a routine tension load proof test per ANSI C29.1 and manufacturer's published proof test load rating.
6. Line Fitting: ANSI 52-5 Ball
7. Tower Fitting: Y Clevis
8. Corona Ring Required On 230Kv Units District Stock #021437 – Line end only
9. Units for which manufacturer requires or recommends the use of corona rings for District Stock # 021436 or #021435 will not be accepted.

**INSULATOR, GUY
FIBERGLASS**

Originator: DSmith

Date: 7/7/06

Approval: DSmith

Date: 7/5/2007

Page 1 of 1

Revision: **NEW**

Stds Committee Approval:

9/22/06

Application: Fiberglass-reinforced, plastic guy insulators are used in the down guys and span guys of 15kV distribution lines to electrically insulate the guys.

Specifications:

Dimensions: Insulators shall have an insulated length of 12 inches.

Electrical Ratings: Minimum dry flashover shall be 140kV; minimum wet flashover shall be 70kV.

Strength Ratings: Insulators shall have a minimum breaking strength of either 15000 lbs or 30,000 lbs.

Tests: Insulators shall be tested electrically and mechanically per ANSI C29.1 as applicable. Test results shall be supplied upon request.

Material: Insulator shall be epoxy or polyester resin fiberglass with ultraviolet inhibitor. Color shall be light gray.

Finish: The insulator shall have a high gloss 2 mil minimum acrylic (aliphatic) urethane finish or equivalent to resist the adherence of contaminating materials, to minimize tracking and to prevent ultraviolet degradation.

Fittings: The unit shall be provided with end fittings which include guy wire rollers at each end capable of accepting 3/8" to 5/8" guy strand. End Fittings shall be pearlitic malleable iron casting per ASTM Specification A-220, or ductile iron casting per ASTM Specification A-536, latest revisions. Casting shall be hot dip galvanized per ASTM Specification A-153, latest revision.

Packaging and Marking: Items shall be suitably packaged to prevent damage in a container convenient for handling and storage. Manufacturer's name or symbol, catalog number and rated mechanical strength shall be on each part and its packaging. The month and year of manufacture shall be permanently stamped on the insulator.

Revision: **Revised description for 021550.**

Stds Committee Approval:
Approved

ANSI Class 55-3 "C" Neck

ANSI Class 55-3 "K" Neck

Specification:

Pin-Type Porcelain Insulators for low-and medium-voltage shall be of the configurations shown, and shall be made of good commercial-grade, wet-process porcelain in accordance with EEI-NEMA Standards TDJ-55, except as modified herein. Supplied with semi conductive glass to eliminate noise. Color as specified in description below.

Reference Specifications: EEI-NEMA TDJ-55, latest revision.

Packaging & Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part and its packaging.

Specification: Composite suspension insulator shall comply with the latest revision of IEEE P1024 and meet the following requirements:

1. Weather Sheds: Non-tracking elastomer such as EPDM Rubber or Silicone.
2. Core: Fiberglass, polyester, or epoxy resin.
3. End Fittings: Aluminum alloy 356-T6 or galvanized malleable iron ASTM A47M
4. Grade 22010 coated per ASTM A-153 Class A.
5. Construction: The weather sheds shall be one piece molded type, fully bonded to the core. The end fitting/weather shed interface shall be sealed from moisture entry and free of voids. End fittings shall be attached to the core by swaging (compression).
6. Color: Shall be Sky Gray.
7. All ratings meet or exceed the requirements of ANSI C29.13 (2000) and LWIWG-01(96)
Corrosion Resistant Boron Free Fiberglass Core / Silicone Housing /
ANSI 52-4 Clevis & Tongue End Fittings.

Application: The porcelain guy strain insulator is used to electrically insulate guy wires. This insulator is suitable for use in guying circuits to 15kV YG. For higher distribution voltages (24.9 and 34.5kV YG) this insulator must be doubled.

Ordering Description: (size) inches porcelain guy strain insulator, ANSI () class, gray or skytone glaze with the following requirements:

Material: Guy strain insulators shall be fabricated from wet process porcelain per latest revision of ANSI C29.4.

Packaging & Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part and its packaging.

Pin Type

Clamp Type For
Service Mast

Application: Used to attached service wire to a wooden structure (Pin Type) or service mast. (Clamp type).

Common Name: House Knob or Mast Clamp

Description: Each unit shall be manufactured wireholders are manufactured from an engineered blend of nylon alloy reinforced with fibers to provide approximately twice the fracture strength as porcelain. The durable nylon alloy material shall be U.V. stabilized for extended service life in ultraviolet exposure.

The bracket design features an open slot which allows the bracket to be installed without disassembling the bolts. Accommodates a range of 1-1/4 through 3-inch diameter pipe. Insulator Color shall be Black.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

**BOLT, DOUBLE-ARMING
with Four Square Nuts - Galvanized**

Originator: DSmith

Date: 7/9/2007

Approval: J Mitchell

Date: 2/13/13

Page 1 of 1

Revision: **Added Item**Stds Committee Approval: **Approved**

Application: Double arm bolts are used for mounting pole line hardware on wood crossarms.

Specification: Double arm bolts and nuts shall conform to latest revision of ANSI B18.2.1 and ANSI C135.1.

Bolts: Bolt threads shall be machine rolled the full length of the bolt prior to galvanizing, and shall meet tolerances as specified per ANSI B1.1, Series UNC, Class 2B.

Nuts: Nut thread shall be tapped to meet tolerances as specified per ANSI B1.1, Series UNC, Class 2B.

Material: Hot rolled carbon steel bar per latest revision of ASTM A307

Finish: Double arm bolt shall be galvanized per ASTM A153.

Packaging & Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on its packaging.

**EYE BOLT, Plain /Thimble
with Square Nut
GALVANIZED**

Originator: DSmith

Date: 7/13/2006

Approval: DSmith

Date: 6/19/2007

Page 1 of 1

Revision: **NEW**

Stds Committee Approval:

Approved

Application: Eye bolts are used for mounting pole line hardware on wood structures.

Specification: Eye bolts and nuts shall conform to latest revisions of ANSI B18.2.1, B18.2.2, C135.4

Bolts: Bolt threads shall be machine rolled prior to galvanizing, and shall meet tolerances as specified per ANSI B1.1 series UNC, Class 2B. Minimum thread length shall be 4 inches on 6, 8 and 10 inch bolts, 6 inches rolled threads on all other lengths.

Nuts: Nut thread shall be tapped to meet tolerances as specified per ANSI B1.1, series UNC, Class 2B.

Material: Hot rolled carbon steel bar per latest revision of ASTM A307.

Finish: Eye bolt shall be galvanized per ASTM A153.

Strength: minimum tensile strength shall be 12,400 lbs.

Packaging & Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each bolt or its packaging.

Approved Manufacturers: Hubbel, Joslyn

**SINGLE UPSET BOLT**

Originator: DSmith

Date: 5/3/2016

Approval: J Mitchell

Date: 05/03/2016

Page 1 of 1

Revision: **Add 16" Bolt**Stds Committee Approval:
Approved

Application: Single upset bolt is used to support spool insulator on wood structures.

Ordering Description: 5/8" x () single upset bolt. Upset bolt shall be supplied with one round washer and two nuts and cotter key. Upset bolt and nuts shall conform to ANSI B18.2.1, B18.2.2, ANSI C135.31 (latest revision).

Bolt: Bolt shall have 4 inches of thread. Threads shall be machine rolled prior to galvanizing. Bolt shall meet tolerances as specified per ANSI B1.1 Series UNC, Class 2B.

Nut: Threads shall be tapped to meet tolerances as specified per ANSI B1.1, Series UNC, Class 2B.

Cotter Key: Shall be commercial grade brass, bronze, or stainless steel and be self-locking.

Material: Hot rolled carbon steel bar per latest revision of ASTM A307.

Finish: Upset bolt shall be galvanized per latest revision of ASTM A153.

Strength: Minimum tensile strength shall be 12,400 lbs.

Packaging & Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on its packaging.

**WASHER, BELLEVILLE, STAINLESS STEEL**

Originator: DSmith

Date: 5/3/2016

Approval: J. Mitchell

Date: 03/30/2016

Page 1 of 1

Revision: **Minor updates to descriptions**

Stds Committee Approval:

Approved

Application: A **Belleville washer**, also known as a cupped spring washer, is a type of non-flat washer. It has a slight conical shape which gives the washer a spring characteristic. Belleville washers are typically used as springs, or to apply a pre-load or flexible quality to a bolted joint.

Wire staples are used to attach ground wire to wooden poles.

Specifications: All staples and finishes must meet or exceed the following Standards.

- Federal Specifications FF-N-105A, type 111, style 1
- ANSI standards for rolled or Slashed points
- EEI-NEMA standards for rolled or slashed points with serrated edge

Packaging & Marking: Items shall be suitably packaged to prevent damage.

The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on its packaging.

Application: This tape is used to insulate low voltage electrical wires and connections. The tape is to be used for most installations including cold weather (0 deg. F) applications.

Specifications: Black, all-weather, polyvinyl chloride plastic insulating tape with a rubber based pressure-sensitive adhesive. Tape shall meet the electrical, physical and test requirements of ANSI/UL 510, CSA-22.2, ASTM D150, and ASTM D1000 latest

revisions.

Packaging & Marking: Each roll shall be on a core of not less than one inch inside diameter, and enclosed in an individual container. The core shall be marked with the manufacturer's name or trademark and type of tape. Each roll-container shall be marked with the core information plus width and length of the tape and date of manufacture.

EPR Insulated - 15kV**

Originator: DSmith

Date 9/29/2021

Approval: J. Mitchell

Date: 9/20/2019

Page 1 of 1

Revision: **Added 1100 compact**

Stds Committee Approval:

Approved

Application:

15kV, EPR underground jacketed cable with concentric neutral is used on multi-grounded distribution systems. This cable may be installed above or below ground in conduit, direct buried, or underwater.

Detail Specification: Refer to the following

- #2 & 4/0 Aluminum, 15kV Concentric Neutral Cable - 5110.0101
- 1000kcm Copper, 15kV Tape Shield Cable - 5110.0102
- 1000kcm Aluminum, 15kV Tape Shield Cable - 5110.0103
- 1100kcm Aluminum Compact, 15kV Concentric Neutral Cable - 5110.0104

Reel dimensions are = Reel Outside Diameter (**D**) X Drum Width (**W**) X Drum Diameter (**d**)

*All cable larger than 4/0 must be supplied on metal reels, designed to be stored long term outdoors. Conductor on reels must be covered with a protective cover to keep cable safe from moisture and UV damage. Reels shall be free of foreign objects (nails, etc.) sharp edges and burrs that could damage the conductor during transit or while dispensing. Reel size shall be a minimum of 1 1/2" larger than wound conductor.

Approved Manufacturers: Kerite & Okonite

Details: All values are approximate.

CHELAN COUNTY PUBLIC UTILITY DISTRICT <i>Owned By The People We Serve</i> 		CABLE UG, ALUMINUM AND COPPER, 600V XLP INSULATED	
Originator: DSmith	Date: 7/10/2006	Page 1 of 3	
Approval: Daniel Scott	Date: 08/02/2022		
Revision: #1 -Revised descriptions to match Maximo. #2 Changed Approved Manufacturers. #3 Added Nexans to approved manufacturer list. #4 Added copper cable.			Stds Committee Approval: Approved

Application: 600 volt underground service cable shall be used for secondaries and services in conduit or direct buried, in wet or dry locations.

Specification:

This 600 volt secondary URD cable shall meet or exceed the following applicable ASTM specifications:

Aluminum

- B-230 Aluminum 1350-H19 Wire for Electrical Purposes.
- B-231 Aluminum 1350 Conductors, Concentric-Lay-Stranded.
- B-609 Aluminum 1350 Round Wire, Annealed and Intermediate Tempers, for Electrical Purposes.
- B-901 Compressed Round Stranded Aluminum Conductors Using Single Input Wire.

Copper:

- B-1 Hard-Drawn Copper Wire.
- B-3 Soft or Annealed Copper Wire.
- B-8 Concentric-Lay-Stranded Copper Conductors, Hard, Medium-Hard, or Soft.

In addition, this 600 volt secondary URD cable shall meets or exceeds all applicable requirements of ICEA S-105-692 for cross-linked polyethylene insulated conductors and UL Standard 854 for Type USE-2.

Cable Assembly: The conductors of multiple conductor cables shall be twisted together with a lay of not greater than 60 times the outside diameter of an insulated phase conductor. Each conductor of a cable shall have a permanent continuous marking, identifying it from other conductors of the cable, and showing the manufacturer's name or trademark, year of manufacture, voltage rating, conductor size, type of insulation and NEC type "USE-2."

As a minimum, triplex cables shall have one phase conductor marked with "Phase A" identification. Footage markers on the conductor insulation is required. Sequential footage markers may be located on either phase conductor or neutral.

- Material Catalog -		CONDUCTOR	5110.03
CHELAN COUNTY PUBLIC UTILITY DISTRICT <i>Owned By The People We Serve</i> 		CABLE UG, ALUMINUM AND COPPER, 600V XLP INSULATED	
Originator: DSmith	Date: 7/10/2006		
Approval: Daniel Scott	Date: 08/02/2022		
Revision: #1 -Revised descriptions to match Maximo. #2 Changed Approved Manufacturers. #3 Added Nexans to approved manufacturer list. #4 Added copper cable.			Page 2 of 3 Std's Committee Approval: Approved

As a minimum, quadraplex cables shall have one phase conductor marked with "Phase A" identification, a second phase conductor marked with "Phase B" identification. Sequential footage markers may be located on any phase conductor or the neutral.

Packaging and Marking: Cable shall be shipped on nonreturnable reels of NEMA WC26 dimensions with in either "cut to order" or standard lengths as specified. Conductor shall be level wound on reel. Both ends of the wire shall be fastened to the reel. Conductor shall be protected by heavy wrapping, either heavy fiberboard or 10 mil. plastic. The net weight, length, conductor size and kind, stranding, voltage class, purchaser's order number, and manufacturer's name, address, starting footage of the cable (at the hub), and serial number shall be marked on a durable label or tag and securely fastened to the outside of the reel.

Reels shall be free of foreign objects (nails, etc.) that could damage the conductor during transit or while dispensing. Reel size shall be a minimum of 1-1/2" larger than wound conductor. Reels shall not exceed maximum flange diameter of 66 inches nor a maximum outside width of 32-1/2 inches. The arbor hole shall have a diameter of 2-1/2 inches.

Shipping: All cable shall be shipped on an open flatbed truck. Reel flanges shall be vertical and positioned to be unloaded from the side. The cable shall be protected by heavy wrapping, either heavy fiberboard or 10 mil plastic. All cable ends shall be sealed with approved end caps to prevent the entrance of moisture during shipping and storage.

Tests: The cable shall be tested in accordance with the applicable requirements of ICEA Publication No. S-105-692 (latest revision) except "sparking testing" shall not be permitted. Results of these tests shall be supplied to the Standards Engineer prior to shipping if requested.

Inspection: Inspection may be made at the manufacturer's plant or upon receipt, at the option of the purchaser. Failure to meet any of the requirements of this specification will be cause for rejection.

Underground or Jumpers**

Originator: DSmith

Date: 6/18/2007

Approval: J. Nieborsky

Date: 1/26/2016

Page 1 of 1

Revision: **include footage marking**

Stds Committee Approval:

Approved

Application: This type of cable is suitable for use in general purpose wiring applications and may be installed in raceway, conduit, direct burial and aerial installations (Jumper wires). It is gasoline, oil and sunlight resistant.

Jumper Wires: The maximum rated circuit voltage is 600 volts. Although not treated as insulation, the covering on jumper riser wire does reduce faults due to atmospheric conditions, shorts caused by excessive vibrations, and faulting caused by objects crossing the leads.

Specifications:

Conductor: Stranded conductor, uncoated soft-drawn or annealed copper per ASTM B3 and B8.

Insulation: The insulation shall be rated 600 volt, flame retardant, cross-linked polyethylene (XLPE) insulated, NEC Type RHH-RHW-2-USE-2, The insulation shall be a black cross-linked polyethylene compound rated 90 degrees C for dry or damp locations and 75°C for wet locations per ASTM D470 and UL 44. Black pigment shall be uniformly dispersed carbon black particles for sunlight resistance.

Marking: Wire shall be marked at regular intervals with the manufacturer's name or symbol, wire size, conductor material, NEC type, voltage rating, sequential footage marking, and UL symbol.

Packaging: The cable shall be one continuous length and wound on a non-returnable plywood or solid wood reel that meets the requirements of NEMA WC 26 Binational Wire and Cable Packaging standard, or is equivalent. The reels shall be shipped with their flanges vertical or on pallets suitable for handling by a forklift. Individual reels shall be marked with manufacturer's name or symbol, catalog number, and name of the item, and the District's purchase order number. A packing slip shall be included with each shipment.

Approved Manufacturers: All

WIRE, ACSR, BARE STRANDED
(Aluminum Conductor, Steel Reinforced)

Originator: DSmith

Date: 7/10/2012

Approval: D. Scott

Date: 04/26/2023

Page 1 of 1

Revision: Maximized footage on reels. Reel dimensions. Approved manufacturers change.

Std's Committee Approval:
25April2023

Application: Used as bare overhead transmission and distribution cable. ACSR offers optimal strength for line design. Variable steel core stranding enables desired strength to be achieved without sacrificing ampacity.

Common Name: ACSR Overhead Wire, non-specular finish

Specification:

The ACSR bare conductor shall meet or exceeds the following ASTM specifications for right hand lay stranding.

- B-230 Aluminum Wire, 1350-H19 for Electrical Purposes
- B-231 Aluminum Conductors, Concentric-Lay-Stranded
- B-232 Aluminum Conductors, Concentric-Lay-Stranded, Coated Steel Reinforced (ACSR)
- B-341 Aluminum-Coated Steel Core Wire for Aluminum Conductors, Steel Reinforced (ACSR/AZ)
- B-498 Zinc-Coated Steel Core Wire for Aluminum Conductors, Steel Reinforced (ACSR)
- ANSI C7.69 Non-Specular Finish (**All ACSR must have non specular finish**)

Actual lengths shall conform to wood reels supplied by the manufacturer and shall be **minus 10 % or plus 10%**. All wire shall have a non specular surface finish.

Packaging and Marking: The net weight, length, conductor size and name, purchaser's order number and manufacturer's name, address, and serial number shall be marked on a durable label and securely fastened to the outside of the reel or coil. *Reels shall be of NEMA WC26 dimensions and free of foreign objects (nails, etc.) that could damage the conductor during transit or while dispensing. See table for reel sizes and wire lengths. **38" Maximum overall width of cable reel and 60" maximum flange diameter.**

Shipping: All cable shall be shipped on an open flatbed truck. Reel flanges shall be vertical and positioned to be unloaded from the side. All reels shall have a protective wrap. Wire shall be shipped on nonreturnable reels with one continuous length. **DO NOT LAY REELS ON THEIR SIDES.**

Approved Manufacturers: Southwire, General Cable, Nehring (4/0 and smaller)

*NR = Non-Returnable Wooden Reel; RMT = Returnable, Steel Reels, Deposit Required.

NR 66.28** Only for maintenance repairs, normally ordered on RMT reels on a project basis.

**WIRE, AAC, BARE-STRANDED
(All Aluminum Conductor)**

Originator: DSmith

Date: 7/7/06

Approval: J. Mitchell

Date: 04/26/2023

Page 1 of 1

Revision: Removed item #'s 034800, 034820 & 034920

Stds Committee Approval:
25April2023**Application:**

AAC Wire is used primarily for overhead distribution, where Ampacity must be maintained and a lighter conductor (compared to ACSR) is desired, when conductor strength is not a critical factor.

Common Name: AAC Overhead Wire**Specification:**

The AAC bare conductor shall meet or exceeds the following ASTM specifications for right hand lay stranding.

- B-230 Aluminum Wire, 1350-H19 for Electrical Purposes.
- B-231 Aluminum Conductors, Concentric-Lay-Stranded.
- C7.69 Non-Specular Surface Finish. **(All AAC must have non specular finish)**

Construction:

Aluminum alloy 1350-H19 wires, concentrically stranded, non-specular finish.

Actual lengths shall conform to wood reels supplied by the manufacturer and shall be **minus 10% or plus 10%**.

Packaging and Marking: The net weight, length, conductor size and name, purchaser's order number and manufacturer's name, address, and serial number shall be marked on a durable label and securely fastened to the outside of the reel or coil. *Reels shall be of NEMA WC26 dimensions and free of foreign objects (nails, etc.) that could damage the conductor during transit or while dispensing. See table for reel sizes and wire lengths. **38" Maximum overall width of cable reel and 60" maximum flange diameter.**

Shipping: All cable shall be shipped on an open flatbed truck. Reel flanges shall be vertical and positioned to be unloaded from the side. All reels shall have a protective wrap. Wire shall be shipped on nonreturnable reels with one continuous length. **DO NOT LAY REELS ON THEIR SIDES.**

Approved Manufacturers: Southwire, Nexans, General Cable, Nehring

**ALUMINUM TIE WIRE**

Originator: DSmith

Date: 7/7/06

Approval: DSmith

Date: 7/7/06

Page 1 of 1

Revision: **NEW**

Stds Committee Approval:

Approved

Application: Generally used in overhead transmission and distribution line construction to mechanically secure components such as conductors to pin insulators. Also used for grounding applications in line construction.

Specifications: The tie and ground wire meets or exceeds ASTM specification:

- B-609 Soft Aluminum Wire. 1350-0 for Electrical Purposes.

The wire shall be made of solid, soft drawn 1350-0 aluminum wire.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

10 lbs. Reels

Spools shall be 12" flange x 4" traverse x 8" drum with a 2" diameter arbor hole.

Approved Manufacturers: Southwire, NEHRING, TIPPER TIE

**CABLE, OH ALUMINUM
600V INSULATED MULTIPLEX**

Originator: D Scott

Date: 1/23/2018

Approval: D Scott

Date: 1/23/2018

Page 1 of 1

Revision: **Updated Description & Amps/Phase**

Stds Committee Approval:

Approved**Application:**

600 volt overhead aluminum service cable shall be used for secondaries and services to serve electric loads.

Common Name: Overhead Secondary Wire

Specification: 600 volt overhead concentric or compressed aluminum XLPE insulated cable, shall meet the following requirements.

Material: Cable shall be manufactured per latest revision of ICEA S-61-402 and shall consist of one or more insulated conductors twisted around a bare ACSR neutral supporting conductor. Cable shall be suitable for normal continuous operation at 75 degrees C without damage.

Packaging and Marking: The net weight, length, conductor size and name, voltage class, purchaser's order number and manufacturer's name, address, and serial number shall be marked on a durable label and securely fastened to the outside of the reel or coil. *Reels shall be of NEMA WC26 dimensions and free of foreign objects (nails, etc.) that could damage the conductor during transit or while dispensing. Quadraplex conductor must have extruded ridge for phase identification. The cable assemblies shall bear the following surface markings at intervals not to exceed 24 inches: Manufacturers Name, Plant of Manufacture, XLPE, Year of Manufacture, and cable footage.

Shipping: All cable shall be shipped on an open flatbed truck. Reel flanges shall be vertical and positioned to be unloaded from the side. The cable shall be tarped or each reel shall be individually wrapped during shipment. Cable shall be shipped (on nonreturnable reels/in coils) with one continuous length.

Approved Manufacturers: CME, NEXANS, SOUTHWIRE & BICC GENERAL (Formerly Alcan)

25M	7 x .173"	0.519	25,000	475	0.25

Packaging and Marking: The steel wire strand shall be shipped in (compact coils or non-returnable reels). Compact hand coils shall have a maximum outside diameter of 29", a minimum outside diameter of 28" and a maximum width of 3-3/4". The reels shall be free of foreign objects (nails, etc.) that could damage the conductor during transit or while dispensing. The marking tags shall include GROSS, TARE, AND NET WEIGHTS. Manufacturer's name or symbol and catalog number shall be on each part and/or its packaging.

Approved Manufacturers: ALFL and CONEX CABLE

Stds Committee Approval:

Approved

Application: Used primarily for, but not limited to, overhead distribution lines in areas of heavy tree congestion to reduce number of nuisance tripping of protective devices. Installed on insulators, otherwise treated as a bare conductor. Requires engineering approval to use.

Specifications: The wire shall meet or exceed the following ASTM specifications:

- B-230 Aluminum Wire, 1350-H19 for Electrical Purposes.
- B-231 Aluminum Conductors, Concentric-Lay-Stranded.
- B-232 Aluminum Conductors, Concentric-Lay-Stranded, Coated Steel Reinforced (ACSR).
- B-399 Concentric-Lay-Stranded 6201-T81 Aluminum Alloy Conductors.

It shall also meet all applicable requirements of ANSI/ICEA S-70-547.

It shall be constructed of Aluminum alloy 1350-H19, 6201, or ACSR conductors, concentrically stranded and covered with crosslinked polyethylene (XLP) as specified below.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

Shipping: Must be delivered on a flatbed truck

**GROUND ROD, COPPER CLAD**

Originator: DSmith

Date: 7/12/2006

Approval: DSmith

Date: 7/5/2007

Page 1 of 1

Revision: **NEW**

Stds Committee Approval:

APPROVED

Application: Copper clad ground rods provide grounding for overhead and underground distribution and transmission and for substation ground grids.

Ordering Description: Copper clad ground rod shall meet the requirements of ANSI/UL 467, latest revision the requirements listed below.

Copper Jacket: A 0.01" thick uniform layer of electrolyte copper shall be metallurgically bonded to the rigid steel core.

Rod Ends: One end shall be chamfered to resist mushrooming when driving.
The other end shall be a blunt 45 degree conical point.

Marking: Each rod shall be clearly stamped with the manufacturer's name or trademark within 12" of the chamfered end.

Packaging: Ground rods shall be securely bound in bundles of five and protected from damage during shipment.

Application: Copper ground plates can be attached to a pole butt or buried in a hole having a minimum depth of 5 ft. They are considered a made electrode without the addition of a ground rod. They are used in areas where standard ground rods are impossible to drive. The larger plate must be used if only one side of the plate is exposed to the earth. The smaller plate may be used if both sides are exposed to the earth.

Specification: Each plate consists of a 0.06" thick solid copper plate with a captive integral copper connector.

Marking: Each plate shall be clearly stamped with the manufacturer's name or trademark.

Packaging: Plates shall be securely bound in bundles of five and protected from damage during shipment.

**SNOW FLAGS**

Originator: DSmith

Date: 12/15/2017

Approval: J. Mitchell/D.Scott

Date: 12/3/2020

Page 1 of 1

Revision: Replaced old version w/ new item for better visibility & longevity

Stds Committee: **Approved**

Application (Electrical Equipment): These units can be bolted to the side of the cabinet. Fiberglass rod with red and reflective white alternating stripes provide 360 degree visibility day or night to identify snow or vegetation covered equipment.

Specification (Electrical Equipment): Each unit consists of a 3/8" diameter 7' or 10' fiberglass rod with a vertical coil on one end and 5/8" x 1" inch galvanized steel mounting hardware.

Application (Hydrants): These units can be bolted to the side of the hydrant. The red flag can be seen above the snow covered hydrant.

Specification (Hydrants) Each unit consists of a 72" steel rod with either a vertical or horizontal coil on one end, a single 6" hard plastic flag at the top, with 5/8" x 2" galvanized steel mounting hardware.

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

**Sign – Fiberglass
Substation Fence - Warning
12" X 30"**

Originator: dsmith

Date: 5/3/2007

Approval: dsmith

Date: 7/5/2007

Page 1 of 2

Revision: **NEW**

Stds Committee Approval:

Approved

Application: This specification covers embedded fiberglass signs used as warning signs on substation fences per Construction Standard 810.002 "Substation Perimeter Fence Safety Sign Placement"

Specifications:

1. The signs shall be manufactured using acrylic modified polyester resin reinforced with chopped strand fiberglass, minimum of 28%. The images are embedded subsurface in the material to protect them on both the front as well as the backside.
2. The nominal thickness of a standard sign is .090" thick. The material shall resist deterioration from exposure to chemicals using DIN 42 115 Part 2 as listed in the following table.

<u>Chemical</u>	<u>Rating</u>
Mild Acids	Excellent
Water	Excellent
Mild Alkaline & Salt	Excellent
Solvents	Excellent

3. The sign shall not be defaceable by spraying with aerosol paint, or brushing and splashing paint. It may be wiped clean without marring or damaging the surface by using mineral spirits, soap and water, or mild solvents.
4. **Corners, holes and edges:** The signs shall have ¼" radius rounded corners or as specified. The signs shall have a clean, routed edge as opposed to a shear-cut edge.
5. **Dimensions:** The overall size of the sign shall be as specified with a +/- .03125" tolerance.
6. **Flatness & Bubbles:** The sign shall lay flat and have an even, non-rippled finish. A wavy surface or trapped air bubbles will not be acceptable. Finished signs shall have a maximum variation of 1/8" in the convex or concave direction when measured perpendicular to the nominal plane of the sign face.

**Sign – Fiberglass
Substation Fence - Warning
12" X 30"**

Originator: dsmith**Date:** 5/3/2007**Approval:** dsmith**Date:** 7/5/2007

Page 2 of 2

Revision: NEW**Stds Committee Approval:****Approved**

7. Mounting Holes and Fence Clips: The sign shall be provided with six aluminum fence clips. The holes in the sign shall be spaced so that the fence clips will properly align themselves to the standard diamond repeat of the chain-link fence, including allowable deviations. The fence clip shall be fabricated from 0.090" thick aluminum and a 1/4-20 locking PEM insert. A tamper-proof or other suitable bolt shall be provided for each hole.
8. Packaging: Signs shall be packaged in a polyethylene bag or shrink packing. Each bag or box shall be identified with the date, quantity and part number. Bag or packages shall then be packaged in a corrugated carton. The outside of each carton shall be labeled with the District Item number as shown below.
9. UV Stability: The sign shall be remain readable and have little fading after 17,000 hours of exposure in a QUV weathering. Sample of weathered and printed sign shall remain on file at the manufacturer and is available for review by the District.
10. Workmanship and quality shall be such that all lettering is sharp, legible, straight and aligned properly. Smudges, misalignment, incorrect wording, misspelling, crooked letters, incorrect color, incorrect materials, or any other problems that show poor quality and workmanship will give sufficient cause to reject any marker. The products are to be guaranteed by the vendor to be free of workmanship or material defect for 12 years against chipping, fading, peeling and de-lamination.

**Tags – Write-On Plastic
with Black UV Resistant Plastic Ties**

Originator: D. Smith Date: 5/4/2007

Approval: D. Smith Date: 2/1/2008

Page 1 of 6

Revision: Revised Equipment Return Tag

Stds Committee Approval:

Approved

Application: This specification covers colored Write-on Plastic Tags with black ultraviolet resistant ties. They are used to track inventory during issues and returns.

Material and Construction:

1. Base material: high tensile .010" thick abrasion and tear resistant plastic with UV inhibitors, Matte finish.
2. Corners: Unspecified
3. Grommet: 3/8" Brass with UV resistant black plastic tie as specified.
4. Dimensions, Lettering and Color: per attached drawings

Performance:

1. Average Outdoor Durability: 3-5 years
2. At 100 Degrees F, No Blistering, Color Change Or Other Material Degradation.
3. No Effect When Immersed In Diesel Fuel, Motor Oil, Antifreeze, 2% Detergent, Kerosene, Acetic Acid, or Acetone and Water.
4. Service temperature range: -40 to + 200 degrees F

Identification and Packaging:

1. 25 tags shall be packaged in a .004" polyethylene resalable bag with UV resistant black plastic tie specified, they can be loose.
2. Each carton marked with name of manufacturer, PO number, date of manufacture, qty, sample and customers stock code number.

Approved Manufacturers: (Artwork Proofs must be on file or submitted before PO approval.)

CHEMICALS

**- Lubricant -
Cable Pulling**

Originator: DSMITH

Date: 1/23/2007

Approval: J Mitchell

Date: 06/10/2011

Page 1 of 1

Revision: **NEW**

Stds Committee Approval:

Approved

Application: Cable pulling lubricant shall be suitable for use as a lubricant to reduce pulling tension on all insulated power cables. Lubricity shall be < 0.15 for PE Jacketed cable on PVC conduit at 200lbs/ft.

Compatibility: Lubricant shall be compatible with and not damage polyethylene, PVC, lead, rubber, or neoprene cable insulations, jacket, and semi-conductor shields. Lubricant shall be non-staining, non-toxic, water soluble and nonflammable.

Calculation Of Quantities:

When ½ gallon bags are used, the number of packs for a pull is: $N = 0.003 \times L \times D$

Where: N = Number of packs required
L = Length of pull in feet
D = Nominal I.D. of conduit in inches

The quantity appropriate for a difficult pull may be up to +50% above this average, depending on conduit fill, conduit type and condition, number of bends, and pulling environment.

Temperature Range: -20°F - 140°F (Winter Mix)

Packaging & Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling or storage. Manufacturer's name or symbol and catalog number shall be on each part or its packaging.

MSDS: Each shipment shall include a copy of the current Material Safety Data Sheet.

**Pole Setting Foam**

Originator: Randy Kono Date: 7/7/2008

Approval: Standards Date: 7/7/2008

Page 1 of 1

Revision: **NEW**Stds Committee Approval:
Approved

Application: A hydrophobic two-part polyurethane, expanding foam designed to rapidly provide intermediate backfill for setting utility poles. It forms a low-density, high-strength foam that can structurally support the pole, and maintain its upright positions. Hardware may be strung after 15 minutes. Serves as a barrier impeding the migration of preservation materials into the surrounding soil and ground water. Displays excellent adhesion to wood and manufactured poles and does not require the use of primers.

Common Name: Pole Setting Foam

Packaging and Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

Approved Manufacturers:

Date: 9/25/06

Approval: DSMITH

Date: 9/25/06

Page 1 of 1

Revision: **NEW**Stds Committee Approval:
9/25/06

Application: Medium-bodied cement for use on Schedule 40 & Schedule 80 PVC pipe and fittings, up to 6" diameter. The cement is supplied with a swab attached to the cap. No primer needed for non-pressure applications. Complies with NEMA and UL specifications. Twenty-four 16 oz cans per carton.

SETUP TIME (Evaporation Rate):

Air Temperature	Approximate Setup Time
10°- 30°F	4-5 minutes
30°- 50°F	3-4 minutes
50°- 70°F	1-2 minutes
70°- 90°F	1/2-1 1/2 minutes

Health & Safety: The cement is flammable and must not be stored or used near open flame. PVC Solvent is extremely flammable and harmful or fatal if swallowed. The vapor is harmful and may irritate eyes and skin. Adequate ventilation is required when using PVC Solvent. Shelf Life is approximately 3 years.

Disposal: Return empty cans to stores for disposal.

Packaging & Marking: Items shall be suitably packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part and/or its packaging.

Rev: added dark sky compliance

Stds Committee Approved

Application: General roadway lighting luminaires for intersection and highways as well as luminaires for underpasses, bridges, parking lots, and rural locations.

Specification:

- All components (LED, driver, photocell, etc.) must be rated 100,000-hour lifetime rating.
- 7 pin photocell receptacle, 360° with LED rated long-life photocell packaged in box with light.
- Rated for ambient temperature from -40C to +50C.
- Light trespass shield from all sides must be available option.
- Corrosion resistant housing; enclosure constructed with cast aluminum, including door. Hinges and bolts can be aluminum, 300 series stainless steel, or silicone bronze.
- 2,700k - 3000k light color.
- Operating voltage range 120v-277v.
- BUG requirements: backlight max 2, up light 0, glare max 2 for 50 watt or less.
- Dark Sky compliant.
- Discrete LED chips required, COB or high-density module unacceptable.
- Minimum efficacy 110 lumens per watt.
- Test reports required: LM79, LM80, TM21, UL Listed, DLC Listed, Driver Spec Sheet.

Packaging and Marking: Each Item shall be individually packaged to prevent damage. The container shall be convenient for handling and storage. Manufacturer's name or symbol and catalog number shall be on each part or (and) its packaging.

Approved Manufacturers: Leotek, Phillips, Eaton, and AEL
