**INSTALL EASILY  
OVER EXISTING  
WINDOWS**

**EXTERIOR  
or  
INTERIOR**

## Warmer in Winter

- Improves window performance by reflecting heat back into the home and reducing energy transfer through the window opening
- Helps reduce heating energy costs

## Visible Light Transmittance and Appearance

- Minimal reduction in visible light passing through the window
- Provides interior and exterior appearance similar to clear glass

## Cooler in Summer

- Less solar energy is transmitted with Low-E glass
- Helps keep interiors cooler
- Helps reduce cooling energy costs

## Reduces Ultraviolet Energy

- Reduces fabric-fading UV energy more effectively
- Helps protect interior furnishings, fabrics, and carpets from fading
