To: Smith, Randy L. (Commissioner) <R.Smith@chelanpud.org>; Arseneault, Garry <Garry.Arseneault@chelanpud.org>; Bolz, Dennis <Dennis.Bolz@chelanpud.org>; Congdon, Ann <ann.congdon@chelanpud.org>; McKenna, Steve <Steve.McKenna@chelanpud.org>; Hartman, Suzanne <Suzanne.Hartman@chelanpud.org>

Subject: <External> Responsibility and Liability of Concern - Re: Implementation of [so called] Smart Meters

Chelan County PUD IT Warning:

Please use caution! This is an external email with links or attachments.

Forenote: Apologize if this letter is overly verbose and restating known facts or data - although doubting most have read or are aware of the Professor Martin Pall's (WSU Biophysics dept.) white paper and research, as regards to electro magnetic field propagation and cellular communication disruption via a variable gate calcium channels - see below links for further study.

Be sure to catch the **very bottom link and references**; with respect to **personal liability**, as regards decisions being made, in consideration of human health, well being, and privacy/security.

As you are surely now fully aware, there exists a growing concerned citizenry whom arduously oppose the implementation of the so called 'smart meters' here in Chelan County. Within the body of empirical scientific evidence, there now exists a copious amount of data indicating the adverse biological effect on cellular communication, i.e., bio-electric communication within animal, plant, and insect (bee) structure.

Outdated industry and FCC standards, which are vastly corrupted by massive conflicting interests, that is, 'the fox building and watching the hen-house' cannot be allowed to sway the factual evidence that EMF (Electro Magnetic Frequency) waves, in the category of smart meters, wi-fi, and cellular (phone) communication, etc., have now been shown to create observable, identifiable, and reproducible biological cellular degradation.

For an exemplary up to date, comprehensive, and detailed analysis by one of the leading research scientists extant - please take the short time to listen to the concise youtube presentation below: Dr. Martin Pall, Professor Emeritus at WSU in the Molecular Bio-science dept.

An exemplary overview on the harmful effects of pulsed non ionizing radiation [that is, non heat signature from microwave radiation], which is endemic in our wireless communication devices, such as wi-fi, cell phone towers/transmitters/phones, and most apropos to the concerns of today, the smart meters.

Definitive analysis with outstanding series studies, throughout the world are presented by Dr. Pall.

How wireless technology harms people and nature

For further consideration and study; an overview white paper by Dr. Pall on the subject of "electromagnetic fields act via activation of voltage gated calcium channels to produce beneficial or adverse effects."

www.ncbi.nlm.nih.gov/pmc/articles/PMC3780531/

In addition, the group "Take Back Your Power" is an excellent detailed presentation, which most of the commissioners have surely viewed thus far, no?

<https://takebackyourpower.net/health-risks-associated-with-smart-meter-wireless-emissions/>

Thank you for your time to review and comprehend this most urgent and extremely prescient body of information - as to be proactive, rather than reactive to the consequences, seems most prudent. With regard to RF/EMF (radio frequency/electro magnetic frequencies), this current generation, will be looked upon in a similar vein to the thalidomide babies of the fifties, the fluoridated children of the sixties, and subsequent generations whom have untold effect from industry run amok, absent the compassion and love for future generations. A snake eating its tail, , , which [we] do not want to further or replicate, , , (correct me if an erroneous assumption)?

Sincerely,
George Maki

Subnote:

Earlier this spring, when meeting with the PUD commissioners at y[our] monthly meeting, I was the fellow whom spoke last, and introduced myself from the perspective of a previous career within engineering configuration management at Boeing.

Safety of flight items, whereby life is at risk due to operational concerns, can yield disastrous results - with far reaching implications and additional liability for those whom did not exercised prudent judgement with respect to known data.

It is my opinion, based upon copious amounts of research and study, that we are facing a 'safety of flight' concern of magnum proportions, here in Chelan County; with respect to these devices being allowed into the homes, businesses, and general environment which we all occupy.

When [we] assume full responsibility for [our] decision this coming to week - to either continuing the implementation, or wisely reject and demand complete abrogation of the current policy, it might behoove us to remember the below video, as an example of technical decision making gone egregiously wrong, and the effect on human life; which in this case was a result of human error and conscious decisions to disregard known safety data and procedures.

Weights and load balances in this example, resulting in catastrophic flight dynamics, killing all on board the aircraft.

Perhaps the analogy is seemingly inordinate, and a dramatic overstatement - perhaps not, as this country is rife with examples of human health and life, taking a back seat to expediency and or ulterior motivations that place everyone's lives in harms way; yet not **revealed** or **disclosed fully** prior to the damage being done, {and the law suits ensuing}.

<https://www.youtube.com/watch?v=lksDISvCmNI>

For further consideration - highly recommend each commissioner understand what is being presented herein (below link), with respect to personal liability for decision making policy - see Seattle and State of Hawaii for examples therein.
